Dear Mr. Ammer,

1 I just heard about the mass spraying of our forest & open space and I am outraged at the thought of this ie Chemicals are not the answer. We need to protect our plants & animals from all chemical spraying (fire-retar. pesticides, etc.) Chemicals can destroy the balance of na This has been shown over & over again in the past. o once we destroy our environment, we don't get it back Also this affects us in forms of cancer, diseases, as etc. It also affects the air we breathe & the wat we drink. Sooner or later we will pay for this indescretion. Please find another way to protect land.

2 Yes, our forests are dry, but a lot of fires are no natural, they are human caused. So spraying & destroying our herbs & plants are not going to ma up for the carelessness of others. Find another wa Do not cause more problems that will be irreversable.

Thank you

Shirley Thieda
