Bureau of Land Management,

I oppose the Western Oregon Plan Revision (WOPR) because of the impact it will have on our environment.

My opposition is based on three factors.

1. logging is the second caused of climate change, 25% of human caused carbon emissions is attributed to logging.

2. Increasing logging in our buffered watershed areas will negatively impact the quality of our water supply around the state.

RECEIVED

3. Logging our old growth trees will negatively impact the habitat for many endangered species.

There are better solutions than the (WOPR) for healthy forest, such as increasing thinning of second growth forest and clearing slash.

Protecting our old growth forests is crucial - a heritage that we must pass on to future generations. So little of the original forests of Oregon are left we must preserve them.

Thank you

Sincerely Yours

Jules Bangs
