Dear Sir:

We are very concerned over the proposal WOPR and the negative impacts on old growth forests, endangered species, degraded habitats, and water pollution.

I am especially concerned about proposals that would reduce reparian reserves and contaminate streams. Also it would seem vital to focus on restoration thinning versus clearcutting and truckloads of miles of logging roads and "OHV" areas.

I urge you to protect our remaining mature and old growth forests on public land and focus management in previously logged areas that are in need of thinning.

Thank you,

Frank + Linda Jones
