2622

I have read the summary of the Draft Enviormental Impact Statement and am in support of Alternative II.

No management of the lands is not an alternative. As a society we cannot afford to not use our resources, here at home and exploit third World Country resources. We have the expertice, knowledge, experience & equipment to manage, harvest and manufacture the resources from these lands.

the 100foot riparian nonharvest area along streams, except intermittant nonfish bearing streams is too restrictive. There should be flexibility allowed that is tied to topography & flow direction of the stream.

The O&C Lands Act of 1937 must be adhered to. these lands are to be managed for permnement forest production.

Thank you,
Kenneth R Harrison
