FINDING OF NO SIGNIFICANT IMPACT
NORMAL YEAR FIRE REHABILITATION PLAN
EA-NV-030-02-07

Finding of No Significant Impact

I have reviewed the Environmental Assessment EA-NV-030-02-07 including the explanation and resolution of any potential significant environmental impacts. Based on the analysis, I have determined that the action will not have a significant effect on the human environment, and therefore, an environmental impact statement will not be prepared.

Rationale

Emergency Stabilization and Rehabilitation (ESR) treatments outlined in the Normal Year Fire Rehabilitation Plan are in conformance with the Carson City Field Office Consolidated Resource Management Plan (May 2001).

The proposed action will:

- Provide for re-vegetation of disturbed areas helping to maintain or improve the conditions of the public rangelands to enhance productivity and watershed values.
- Maintain the quality and diversity of habitat and forage for livestock, wildlife, and wild horses.
- Insure watershed health, control or eliminate noxious weeds.
- Assist in meeting the standards and guidelines for rangeland health (prepared by the Resource Action Committee for the Sierra Front-Northwest Great Basin Area 1997)
