Dear Mr. Amme,

I strongly urge you to NIX plans for massive toxic herbicide applications in 17 western states. It would destroy, expose applicators, native peoples plant gathering, non-targeted wildlife, vegetation and anyone in those areas, also waters.

There are non-chemical techniques to get rid of invasive weeds (like can also be prevented by decreasing grazing & OHV use in wild areas). PS persistent poisons are not needed - just kill everything.

Do your job - Protect Our Public lands!

Your attention to this most urgent matter would be much appreciated by all present & future generations of all species.

Thank you,

Lydia
