Subject Pinedale Anticline Oil and Gas Development Draft SEIS

Matt Anderson
BLM Management
Pinedale WY

Dear Sir:

W-1 I-29-1 The proposed SEIS does not have enough seasonal wildlife protection, nor does it set aside specific areas where wildlife will have protection from year-round drilling during migration, breeding and nesting seasons.

W-2 I-29-2 Careful monitoring using the best available science and the professional opinion of wildlife biologists must be used to determine the amount of development to prevent further decline of mule deer herds, sage grouse and pronghorn.

G-1 I-29-3 Air and water quality must be protected as well as protection of cultural resources that may be in the area.

Thank you,

F. Earline Hittel
