Dear Mr. Anderson

I am writing to voice my opinion concerning increased gas and oil industry proposals. This proposal calls for an increase of 4,400 more wells which are almost ten times more than the current amount.

With the ramped up drilling and removal of year around stipulations the wildlife would be greatly impacted. Not only would the native ground species such as sage grouse be impacted but also the big game animals which this part of Wyoming is noted for. Already recent studies show a correlation between mule deer population decline and increased gas and oil activity. My neighbors and I do not want to sacrifice the precious wildlife so that gas companies can make a profit. It is time for our country to take a stand on conservation and not exploitation!

Recent statistics online from Sublette county courthouse show increased crime rates (notably methamptamine use and domestic violence) and has over stressed our local community infrastructures. Tourism the once most popular economy has suffered in light of the increase in populations related to gas and oil industry.

AQ-2 AQ-1 I-31-1

Most recent air quality statistics show five times the ceilings set by BLM. Now they want to increase the rate of drilling by three times. The BLM must put a cap on emissions to preserve the striking views we now and love and cherish and want to hand down to future generations. The BLM must act responsibly to protect the people who live and recreate in these areas. They can begin by requiring that the industry act in good faith and use cleaner low emission rigs, quantum leap dehydrators and flareless completions.

I would hope that this letter can be added to the growing pile that you have received from other concerned and upset constituents.

Sincerely,
Jennifer Jensen
