RE: Support Access to Natural Gas in the Pinedale Anticline

Please reply to

U.S. energy prices continue to rise, while our energy policy continues to ignore use of our domestic natural resources.

Wyoming's Pinedale area contains enough natural gas to supply ten million homes annually for more than 30 years if federal regulations permit limited increased access with necessary environmental safeguards. According to the U.S. Bureau of Land Management (BLM), the Pinedale Anticline contains an estimated 21 trillion cubic feet of natural gas reserves, making it the second largest gas field in the United States.

I support Proposal D to allow limited year-round drilling in concentrated areas to better utilize existing natural gas drilling and development operations in Wyoming's Pinedale Anticline Project Area.

Sincerely,
