EMS TRANSMISSION

Instruction Memorandum No. BC-2000-054

Expires: 9/30/01

To: All Washington Office and Field Officials

Attn: Accountable Officers, Real Property Managers, and Office Engineers

From: Director, National Business Center

Subject: Fiscal Year 2000 Real Property Inventories

DD:09/15/00

The Bureau of Land Management's capitalization level for administrative real property is \$250,000 per site. The site value consists of the full cost of all administrative real property items within a site, including land (if purchased), buildings, structures, and site improvements. Only new sites or additions and improvements that cost \$250,000 or more are added to the capitalized Real Property System. When a site is valued at less than \$250,000, funds are expensed in the fiscal year in which new site, addition, or improvement is completed. If the cost of new improvements exceeds the capitalization threshold, the value of the new improvements **only** will be entered into the general ledger and subsidiary real property records.

To comply with the Chief Financial Officer's Act requirement for an annual inventory for all items in the Fixed Assets Property System, each office's real property manager, office engineer, and the accountable officer must certify that the real property data on the attached lists is accurate, complete, and up to date, and that the site is still required. Inventory statements and space for signature are provided on each site printout. The printout date is July 1, 2000.

To assist in conducting the inventory, detailed procedures follow:

1. Office Real Property Manager

The real property manager must compare the attached printout with office records and observations from the last time the site was visited. Minor pen-and-ink changes to the description may be made on the printouts. Significant changes must have supporting documentation attached. Upon completing of the review, the manager should sign and forward the report to the office engineer.

2. Office Engineer

The office engineer must compare the attached printout with their Facilities Inventory Maintenance Management System (FIMMS) records for accuracy and must note the last time a physical inspection of the site was completed. This is done to certify that the site is in reasonable and useable condition since it is the engineering community's responsibility to maintain the site. Minor pen-and-ink changes to description may be made on the printouts. Significant changes must have supporting documentation attached. The real property manager and the office engineer should work together to correct any discrepancies. If there are differences between real property and FIMMS because of the capitalization limit, they should be noted as the reason for the difference. Upon completing this review, the engineer should sign and forward the report to the Accountable Officer.

3. Accountable Officer

The Accountable Officer must certify that the site listed on the attached printout is being utilized and is still needed by the office. Upon completing this review, the Accountable Officer should sign and forward the report to the National Business Center (NBC), BC-680A.

Please ensure that all inventories are complete and accurate since the NBC will be using this information to have new real property identification signs made for all locations.

(Please contact BC-680A with any suggestions for new real property signs.) This includes checking the difference between buildings and structures. Definitions for all real property terms are available at: <http://ncweb.sc.blm.gov/bc680a/>.

All certifications must be completed by September 15, 2000.

If there are any questions regarding the inventory process, please contact Lee Krebs at (303) 236-9459 or Gery Behr at (602) 906-5581.
