

GeoCommunicator - Federal Land Stewardship

GeoCommunicator (www.geocommunicator.gov) is an Internet website for the dissemination of spatial data from the National Integrated Land System and the Bureau of Land Management's (BLM) Land and Mineral Records System. The BLM is responsible for cadastral survey, land and mineral leasing, and resource management on public lands. The National Integrated Land System is a joint development project between the BLM and the U.S. Forest Service (USFS) conducted in partnership with states, counties, and private industry to provide a comprehensive solution for integrating survey data with parcel-based land records in an enterprise GIS environment.

Federal Land Stewardship

Federal Land Stewardship contains parcel boundaries and ownership for federal lands in the United States. The data are provided in NAD83 by the BLM, National Park Service, and the USFS at a scale of 1:100,000 or better. Other Federal lands are shown as reported by the U.S. Geological Survey's National Atlas at a scale of 1:2,000,000.

The Federal Land Stewardship application provides:

- An Internet-based, easy-to-use *land manager viewer* to spatially or textually search, locate, and view the federal surface management agency for a parcel of land.
- Contact information for the federal surface management agency.

A map service for the federal ownership layer is also available. The map service allows users to view or "stream" live data directly to their desktop with the use of GIS tools or into their web browser. Data from the map service are easily integrated with other data from the Internet and local datasets.
