

THE BLM

A Sound Investment for America

Did you know that within the Department of the Interior, there's one agency that manages more than 245 million acres of public lands—an area larger than New York, Florida, Minnesota, and California combined?

This same agency also raises more money each year for the American taxpayer from the use of these lands than it spends. In addition, it manages recreational activities, conserves much of our Nation's natural and cultural resources, improves habitat for many species of wildlife and plants, and administers 700 million acres of mineral estate. And it does so with a work force of just 10,000 people.

This is today's Bureau of Land Management (BLM). These public lands, primarily in the West, extend across rangelands, forests, high mountains, arctic tundra, and deserts, and are one of America's greatest assets—both economically and environmentally. In its management of these lands and resources, the BLM strives to balance economic benefits to our Nation with the conservation of precious natural resources. For example, while the BLM authorizes renewable energy production, mineral extraction, timber harvesting, and grazing across the National System of Public Lands, its conservation efforts ensure that our Nation's natural, scenic, recreational, and cultural resources will be available to future generations of Americans.

The BLM's management of public lands contributed more than \$112 billion to the national economy in 2010 and supported more than 500,000 American jobs.

Investing in Jobs

Taxpayer investment in the BLM yields employment opportunities. The BLM's management of activities on public lands supported an estimated 507,750 American jobs in FY 2010.

Investing in Recreation*

The National System of Public Lands offers more diverse recreational opportunities than are available on lands administered by any other Federal agency, with more than 58 million visits in 2010 to BLM-managed lands and waters.

* Direct and total impact numbers reflect (\$) millions.

Investing in Energy*

The National System of Public Lands yielded \$40 billion worth of energy and non-energy minerals in FY 2010. The extraction of these resources and their introduction into the market boosted the American economy by approximately \$103 billion.

Investing in Timber and Grazing*

BLM-administered lands yielded \$337 million worth of timber, while grazing on BLM lands made possible the introduction of \$310 million worth of feed and fiber into the market. Overall, these lands provided \$814 million worth of timber-related economic activity and \$540 million in grazing-related benefits in FY 2010.

Washington	6.6	15.5	1.5	3.2
Wyoming	5.7	9.7	44.7	69.5

* Table numbers reflect (\$) millions.

What do these numbers mean?

Data in the “Direct” column are an estimate of the BLM’s economic contribution to local economies in terms of employment and other economic benefits directly associated with BLM-managed lands and resources. These benefits might be associated with river guides and other recreation outfitters, for example. Data in the “Total” column for each category of BLM activity demonstrate the agency’s impacts, including indirect and induced benefits associated with, for instance, companies that manufacture outdoor gear and local service businesses in the gateway communities.

National numbers may be larger than the sum of individual state numbers because the national model takes into account activity across state borders (for example, machinery production in California that supports mining activity in Wyoming). Employment benefits reflect an annual average for full- and part-time private sector jobs. Table totals may not add exactly, owing to rounding. The numbers presented in the report are preliminary and are subject to change based on further review.
