Subject: WOPR Comments

It is important to manage our natural resources properly. It appears to me our past management plans have left us with the image of a disaster ravaged landscape.

Drive along highways and see beautiful trees along the road. Look through the fringe of trees and see a ~~big~~ landscape with a nude appearance. Where's the trees?!!

Thinning protects our land, our wildlife, and gives all beings a habitat and vista to enjoy.

No further clearcutting should ever reign again.
Thinning should always be permitted and encouraged.

Sincerely
Sandra Lathrop.
