2570

Attn: Alan Hoffmeister:

It takes 80 years of slow growth to <sup>get to</sup> that age, then within hours the tree is gone.

There is a space where that tree used to be. It is now empty — gone — no protection for wild life — no cover for plants down below — gone

There will be no awe inspiring looks from visitors. No beautiful photographs of this lovely land of trees — just empty places — bareness — clear cutted.

An animal has a harder time to hide — not large enough habitat for certain animals or birds. There is not enough shade for anybody or anything

Global warming is here and we make it worse by cutting these trees down.

Instead of the beaver state are we to be known as Oregon — the clear cutting state?

Please halt — stop the production plan — please do not cut these trees!!

Thanks for reading this.

Sincerely

Barbara J Pereira
