Opuntia basilaris var. brachyclada	short-joint beavertail	VASC	Cactaceae			BLMS	List 1B.2		G5T1	S1.2		No		Until March 8, 2004, this var. had been considered K in both Needles and Barstow. But the Jepson Manual does not consider this a desert species, and a report by Pamela MacKay calls into question whether it ever occurred in the eastern Mojave. The draft BLM West Mojave Plan states that it only occurs on private lands in the WEMO planning area. It was therefore been changed to "S" in both Needles and Barstow. The CNPS Rare Plant Treasure Hunt documented an occurrence about 1 mile north of Cajon Pass on BLM land in 2010. The taxon has therefore been moved back to "K" for Barstow.																	
Pediomelum castoreum	Beaver Dam breadroot	VASC	Fabaceae			BLMS	1B.2		G3	S2		No	03-Oct-11	Currently (5-17-2011) being considered for addition to List 1B.2 (is now 4.3). Not yet mapped in CNDDDB. I mapped 7 occurrences from Jepson Interchange that had geographic coordinates--6 of these are very close or on BLM lands, though there are issues with the datum. Plant very likely occurs on BLM lands in the Barstow FO.

Global and State Rank: The Global Rank is assigned by NatureServe and reflects the overall condition of the element throughout its global range; G-ranks are used for species as a whole, T-ranks for subspecies; the State (S) Rank is assigned by the State Heritage Program and reflects the overall condition of the element within the State. Code meanings can be found at: <http://www.natureserve.org/explorer/ranking.htm#interpret>. Comments: Additional information, only provided for some plants. Date Updated: This field is provided to show when changes or updates were last made to an element; this tracking was implemented only in recent years, so the field is blank for most elements. K or S under BLM field offices: K = Known to occur on BLM lands managed by that field office; S = Suspected to occur on BLM lands managed by that field office.
