Fire Specialist Report

Subject: Continuity of Cheatgrass vs. Sandberg bluegrass.
From: Rance Marquez

On June 1, 2007, I took these photos to show the continuity similarity between cheatgrass and Sandberg bluegrass. These photos were taken approximately 1.5 miles east and 1 mile west of Brigham point respectively. The ground cover of these sites was approximately 95%. Based on my 16 years of wildland fire suppression and 7 years as a Burley Field Office Fire Use Specialist there would not be a noticeable difference on fire behavior based on the arrangement and continuity of these sites.

Cheatgrass Continuity
