

APPENDIX V— FEDERALLY LISTED AND CANDIDATE SPECIES MANAGEMENT, CONSERVATION, AND RESTORATION MEASURES

INTRODUCTION

This appendix summarizes the programmatic management direction for the Cottonwood RMP and the conservation and restoration measures that the BLM will implement for federally listed and candidate animals, fish and plants. The overall management direction of the RMP is described in the first half of the appendix, and the management, conservation, and restoration measures (Tables V-1 through V-7) are included in the second half of the appendix.

MANAGEMENT DIRECTION AND GUIDANCE FOR THE RMP

Under section 202 of FLPMA and 43 CFR 1600, BLM is required to prepare and implement RMPs that provide a framework to guide the management of public lands. An RMP makes land use allocations, sets broad production goals, and establishes restrictions on resource programs to protect important resource values. In the development of RMPs, FLPMA states that BLM must follow a number of principles and processes.

Management guidance for resource programs includes laws, Executive Orders, regulations, US Department of the Interior (DOI) manuals, BLM manuals, and instruction memoranda (Idaho State Office). Together, these form the basis for the continuing management guidance and decisions that apply to public land resources and programs in the Cottonwood RMP. The overall management guidance, applicable state and federal laws, and policy are summarized in Chapter 1 of the RMP. General management policy for the Cottonwood RMP is provided by FLPMA.

RMP PROGRAMS

The major tool for managing public lands in the CFO management area is the application of management, conservation, and restoration direction under the framework of 32 programs, which are identified previously in the RMP. The programs provide specific management direction for each major resource or use (i.e., Resources, Resource Uses, Special Designations, and Social and Economic Conditions). The programs are intended to provide a CFO-wide perspective on the management of the public lands resource. Several programs may be grouped together where applicable, or if not listed would utilize the applicable management actions listed in the Special Status Species program at the beginning of table for each specie(s) (Tables V-1 through V-7).

APPLICATION OF CONSERVATION MEASURES AND IMPLEMENTATION STRATEGY

The BLM will implement the appropriate management, conservation or restoration as part of the review process for ongoing, new, and renewable Federal activities. Measures specific to supporting recovery for species are also identified. Implementation actions provide greater detail regarding how and where specific actions will be implemented and the processes that will be followed. Highlights of the conservation measures, and implementation actions that generally apply to all species follow below and details are presented later in this appendix.

Project-level inventories will be completed in suitable habitat during project planning if inventory information is not available or adequate to determine whether or not impacts to the species or habitat are likely to occur. For some of the species, the State Office will develop technical guidance, issued as Instruction Memorandum, concerning special status species project-level inventory and assessment requirements. If direct or indirect negative impacts to the species or its habitat are anticipated as a result of new and ongoing BLM discretionary actions, the activity will be modified to avoid or minimize anticipated negative impacts and, where feasible, to promote recovery of listed species and conservation of candidate species. Where needed, BLM will complete Endangered Species Act Section 7 consultation for new activities that may affect the species and its habitat. The conservation measures for each of the species include a provision to implement adaptive management as needed to achieve conservation objectives. This will be accomplished by conducting site-specific implementation and effectiveness monitoring to track progress toward achieving the management objectives. The BLM, National Marine Fisheries Service, and USFWS will meet annually or as needed to review the implementation progress for the conservation measures, determine if current management actions are meeting management goals, and modify implementation actions as needed if progress toward goals is inadequate.

Management actions to implement the conservation measures will be adjusted as needed to ensure that management objectives are met for each species. The implementation actions would also include specific information regarding BLM's responsibilities and a timeframe for implementation. Timeframes are based on the need for timely information required to conduct the consultations for ongoing and new federal actions. Timeframes would be influenced by each species' relative level of endangerment, the importance of BLM lands to the species relative to overall species distribution, the level of risk faced by BLM until consultations are complete, and budget considerations.

SPECIES-SPECIFIC CONSERVATION MEASURES AND IMPLEMENTATION ACTIONS

Conservation measures were created for each species, based on that species' conservation and recovery needs. An abbreviated list of conservation and recovery measures are included for federally listed fish (**Table V-5**), because specific measures are identified in Chapter 2 (Aquatic Resources, Fish, and Special Status Fish) and other appendices (**Appendix C**, Conservation and Restoration Watersheds; **Appendix E**, Aquatic and Riparian Management Strategy; and **Appendix W**, Desired Conditions and Watershed and Aquatic Condition Indicators). Other RMP programs (Chapter 2) also may have specific reference to conservation measures that would be applicable for federally listed and candidate species, specifically Chapter 2, Wildlife and Special Status Wildlife and Special Status Plants sections. Management actions and conservation measures are included in the following tables:

Table V-1: Gray Wolf;

Table V-2: Bald Eagle;

Table V-3: Canada Lynx;

Table V-4: Northern Idaho Ground Squirrel;

Table V-5: Sockeye Salmon, Spring/Summer Chinook Salmon, Fall Chinook Salmon, Steelhead Trout, and Bull Trout;

Table V-6: MacFarlane's Four-O'Clock and Spalding's Catchfly; and

Table V-7: Yellow-Billed Cuckoo.

Because each species has unique requirements, terms such as “suitable habitat” are defined in Appendix S, Species-Specific Habitat Definitions, for federally listed animals and plants.

<u>RMP Programs Evaluated</u>	<u>Conservation and Restoration Measures</u>	<u>BLM Implementation Actions</u>	<u>BLM Responsibilities</u>
<p><u>Special Status Animal and Plant Management</u> <u>Note: Common to All Programs</u></p>	<p><u>The conservation measures contained throughout this table implement important elements included in the Recovery Plan for the bald eagle. The conservation measures reflect BLM's commitment to support species recovery and meet ESA objectives.</u></p> <p><u>1) In cooperation with Idaho Department of Fish and Game, Tribes, USFWS, and others:</u></p> <p><u>a) Continue to cooperate in determining the distribution of populations and suitable habitats.</u></p> <p><u>b) Following current monitoring protocols, continue to cooperate in conducting systematic nest surveys and monitoring.</u></p> <p><u>c) Cooperate in the management of nest sites and communal roost sites to promote species recovery.</u></p> <p><u>d) Cooperate in the maintenance and improvement of habitat in key foraging areas, for example, mule deer winter range, and aquatic and riparian habitat for fish and waterfowl, where a need exists.</u></p> <p><u>e) Cooperate to maintain and develop nesting and roosting habitat for future use by bald eagles.</u></p>	<p><u>The implementation actions reflect BLM's commitment to support species recovery and meet ESA objectives. Actions apply to BLM lands and activities only. Habitat terms used throughout this document are defined in Appendix S: Species-Specific Habitat Definitions.</u></p> <p><u>1) Following actions to be completed in cooperation with others:</u></p> <p><u>a) Mapping and data inventory:</u></p> <p><u>i) Continue to identify, record, and map the following habitats: nest sites, communal roost sites, key foraging areas, and other suitable habitat on BLM lands.</u></p> <p><u>ii) Maintain a spatial database of species population and habitat information for BLM lands.</u></p> <p><u>b) Cooperate with Idaho Department of Fish and Game and USFWS to accomplish regular nest surveys and other monitoring (such as winter counts).</u></p> <p><u>c) Update or develop management plans for nest sites, communal roost sites, or key foraging areas, as appropriate, for habitats located on BLM lands.</u></p>	<p><u>1) As stated below:</u></p> <p><u>a) CFO, in coordination with Idaho Department of Fish and Game regional office, State Office support for mapping as needed.</u></p> <p><u>b) CFO in coordination with Idaho Department of Fish and Game regional office and USFWS.</u></p> <p><u>c) CFO in coordination with USFWS and Idaho Department of Fish and Game regional office.</u></p> <p><u>d) CFO in coordination with Idaho Department of Fish and Game regional office.</u></p> <p><u>e) CFO in coordination with Idaho Department of Fish and Game regional office.</u></p>

Table V-2
Bald Eagle (*Haliaeetus leucocephalus*) – Management, Conservation, and Restoration Measures for CFO (continued)

<u>RMP Programs Evaluated</u>	<u>Conservation and Restoration Measures</u>	<u>BLM Implementation Actions</u>	<u>BLM Responsibilities</u>
	<p><u>f) Working with other agencies, compile a general list of BMPs that would apply to all programs, to the extent that such a list would assist with consultation and species recovery. The intent of implementing BMPs is to avoid or minimize negative impacts.</u></p>	<p><u>d) Take advantage of opportunities as they arise.</u></p> <p><u>e) Manage suitable habitat to maintain and promote tree regeneration, including plantings, fencing, or other management actions. Identify riparian areas that would be appropriate for cottonwood restoration.</u></p> <p><u>f) BMPs:</u></p> <p><u>i) State Office to coordinate development of BMPs with CFO, District Office, USFWS, and Idaho Department of Fish and Game. Instruction memorandum to be issued by State Office.</u></p> <p><u>ii) CFO to implement BMPs.</u></p>	<p><u>f) Responsibilities:</u></p> <p><u>i) State Office, District Office, and CFO with USFWS and Idaho Department of Fish and Game.</u></p> <p><u>ii) CFO</u></p>
	<p><u>2) Ensure that ongoing federal actions support or do not preclude species recovery.</u></p>	<p><u>2) Ongoing BLM activities:</u></p> <p><u>a) As needed, review ongoing activities within 2.5 miles of bald eagle nests or within the area designated in the local bald eagle nest management plan, and within one mile of communal roost sites where local consultation has not yet been completed.</u></p> <p><u>b) Determine if direct or indirect negative impacts to the species or its habitat are occurring as a result of ongoing discretionary BLM actions. If so, modify the activity to avoid or minimize negative impacts and, where feasible, promote species recovery.</u></p>	<p><u>2) CFO (all actions)</u></p>

Table V-2
Bald Eagle (*Haliaeetus leucocephalus*) – Management, Conservation, and Restoration Measures for CFO (continued)

<u>RMP Programs Evaluated</u>	<u>Conservation and Restoration Measures</u>	<u>BLM Implementation Actions</u>	<u>BLM Responsibilities</u>
		<u>c) Where needed, complete Section 7 consultation for ongoing activities that may affect this species and its habitat.</u>	
	<u>3) Ensure that new federal actions support or do not preclude species recovery.</u>	<u>3) New BLM activities:</u> <u>a) Project-level inventories will be completed in suitable habitat during project planning if inventory information is not available or adequate.</u> <u>b) If direct or indirect negative impacts to the species or its habitat are anticipated as a result of new BLM actions, modify the activity to avoid or minimize anticipated negative impacts and, where feasible, promote species recovery.</u> <u>c) Where needed, complete Section 7 consultation for new activities that may affect this species and its habitat.</u>	<u>3) CFO (all actions)</u> <u>c) CFO</u>
	<u>4) Protect bald eagles from disturbance that might result in displacement during critical periods.</u>	<u>4) Avoid implementing activities near nest sites during the breeding season (February 1 to August 15) or follow the local bald eagle plan guidance near communal roost sites and key foraging areas during the wintering season (November 1 to March 1).</u>	<u>4) CFO</u>
	<u>5) Implement adaptive management as needed to achieve conservation objectives.</u>	<u>5) Conduct site-specific implementation and effectiveness monitoring. Adjust management as needed to ensure that management objectives are met.</u>	<u>5) CFO in coordination with Idaho Department of Fish and Game regional office.</u>

Table V-2
Bald Eagle (*Haliaeetus leucocephalus*) – Management, Conservation, and Restoration Measures for CFO (continued)

<u>RMP Programs Evaluated</u>	<u>Conservation and Restoration Measures</u>	<u>BLM Implementation Actions</u>	<u>BLM Responsibilities</u>
	<u>6) Support conservation easements, cooperative management efforts, and other programs on adjacent nonfederal lands to support recovery of the bald eagle.</u>	<u>6) Take advantage of opportunities as they arise.</u>	<u>6) CFO</u>
<u>Air Resources</u>	<u>None</u>	<u>None</u>	<u>None</u>
<u>Soil and Water Resources: Riparian/Wetland Areas (includes weed management)</u>	<p><u>1) Activities within the Soil and Water Resources; Riparian/Wetland Areas (includes weed management) program will implement relevant conservation measures as described in the Special Status Animal and Plant Management program section to promote recovery. As a part of promoting recovery, the goals are to promote mature forested riparian habitat conservation, to avoid negative impacts, or to minimize impacts if avoidance is not possible.</u></p> <p><u>2) Projects involving the application of pesticides (herbicides, insecticides, etc.) in rangelands that may affect the species will be analyzed at the project level and designed such that pesticide applications will support conservation and recovery and minimize risks of exposure.</u></p>	<p><u>1) Apply relevant conservation measures from the Special Status Animal and Plant Management program section at the beginning of this table.</u></p> <p><u>2) Site-specific stipulations will be developed locally using the following criteria:</u></p> <p><u>a) Evaluate the benefits and risks of vegetation treatment, including the following: application methods; pesticides, carriers, and surfactants used; needed treatment buffers; and use of non-chemical weed control (for example, bio-controls, hand pulling). If management objectives can be effectively accomplished using non-chemical methods, such is the preferred alternative.</u></p> <p><u>b) Apply appropriate spatial and temporal</u></p>	<p><u>1) CFO</u></p> <p><u>2) CFO in consultation with USFWS (all actions)</u></p>

Table V-2
Bald Eagle (*Haliaeetus leucocephalus*) – Management, Conservation, and Restoration Measures for CFO (continued)

<u>RMP Programs Evaluated</u>	<u>Conservation and Restoration Measures</u>	<u>BLM Implementation Actions</u>	<u>BLM Responsibilities</u>
		<p><u>buffers to avoid species' exposure to harmful chemicals and human disturbance within and adjacent to key habitat areas.</u></p> <p><u>c) Implement appropriate revegetation and weed control measures to reduce the risks of non-native species infestations following any ground/soil disturbing actions in or near suitable habitat.</u></p>	
	<p><u>3) Where needed and feasible, coordinate with adjacent land owners and local governments regarding control of invasive plants in riparian areas through cooperative weed management programs.</u></p>	<p><u>3) Take advantage of opportunities as they arise.</u></p>	<p><u>3) CFO</u></p>
	<p><u>4) Conserve mature riparian forests (i.e., cottonwood galleries) in suitable habitat to maintain their integrity for use as bald eagle nesting, roosting, or perching substrate.</u></p>	<p><u>4) Management actions:</u></p> <p><u>a) Emphasize eradication of non-native invasive species in riparian areas that compete with cottonwood regeneration. Continue to identify problem areas (such as areas infested with tamarisk, Russian olive, and false indigo) and implement appropriate weed control measures.</u></p> <p><u>b) Avoid issuing commercial firewood cutting permits in suitable habitats in riparian forests. If permits are issued, ensure that such activities are consistent with the long-term maintenance of mature cottonwood forests.</u></p> <p><u>c) As needed, close suitable habitat in riparian forests to non-commercial firewood cutting</u></p>	<p><u>4) CFO (all actions)</u></p>
