

**APPENDIX B - COMPARISON OF AMENDED LAND USE PLANS WITHIN THE BUREAU OF LAND MANAGEMENT, IDAHO FALLS AND TWIN FALLS DISTRICTS, BY ALTERNATIVE**

---

The following tables compare and contrast potential land use planning direction and action changes for each land use plan (LUP) in the planning area. The potential changes would occur based on which alternative is picked in the Record of Decision (ROD) for the Fire, Fuels, and Related Vegetation Management Direction Plan Amendment Final Environmental Impact Statement (EIS). This information is organized in columnar format to allow easy comparison among alternatives. The No Action Alternative represents current management direction, and Alternative E represents the Bureau of Land Management's (BLM's) Proposed Plan Amendment. The alternative descriptions that follow have been reformatted and abbreviated to facilitate comparison of the alternatives as they would affect each LUP. See Chapter 2 of the EIS for the complete descriptions of alternatives.

<b>TABLE 1. BENNETT HILLS – TIMMERMAN HILLS MANAGEMENT FRAMEWORK PLAN</b>					
<b>Management Direction</b>	<b>Alternative A - No Action</b>	<b>Alternative B</b>	<b>Alternative C</b>	<b>Alternative D</b>	<b>(Proposed Plan Amendment)</b>
<b>Management Direction Common To All Alternatives</b>	<p><b>Management Restrictions:</b>                      Wildland fire suppression restrictions and restoration/fuels reduction treatment restrictions would be implemented under all alternatives and would be specified in each of the 12 LUP amendments. These restrictions would be applied to suppression activities and vegetation treatment actions with the intent of protecting sensitive resources. This section lists the resource disciplines for which restrictions were developed. Appendix Q describes in detail the management actions to be applied.</p> <p><b>Wildland Fire Suppression Restrictions:</b>                      Suppression restrictions were developed for the following resource disciplines:</p> <ul style="list-style-type: none"> <li>• Fire Management</li> <li>• Cultural Resources and Historic Trails</li> <li>• Noxious Weeds</li> <li>• Recreation</li> <li>• Riparian Areas</li> <li>• Special Designations (wilderness study areas [WSAs], Areas of Critical Environmental Concern ACECs)</li> <li>• Vegetation</li> </ul> <p><b>Fire and Non-Fire Vegetation Treatment Restrictions:</b>                      The following fire and non-fire vegetation treatment restrictions will be applied to site-specific restoration and hazardous fuels reduction treatment actions for the following resource disciplines:</p> <ul style="list-style-type: none"> <li>• Vegetation</li> <li>• Air Quality</li> <li>• Cultural Resources and Historic Trails</li> <li>• Hazardous Materials and Abandoned Mine Sites</li> <li>• Livestock Grazing</li> <li>• Placeholder Species</li> <li>• Riparian Areas</li> <li>• Special Management Areas</li> <li>• Visual Resources</li> <li>• Wildlife</li> </ul>				

<b>TABLE 1. BENNETT HILLS – TIMMERMAN HILLS MANAGEMENT FRAMEWORK PLAN</b>					
<b>Management Direction</b>	<b>Alternative A - No Action</b>	<b>Alternative B</b>	<b>Alternative C</b>	<b>Alternative D</b>	<b>Alternative E (Proposed Plan Amendment)</b>
<b>Management Direction Common To All Action Alternatives</b>		<p><b>Desired Future Condition (DFC):</b> DFC is considered a management objective. For the purposes of this analysis, it indicates the proportional distribution of vegetation age classes/successional stages across the landscape. Each vegetation age class represents different vegetation species composition. Attaining a DFC within a vegetation type will promote a healthier and more diverse vegetation structure and composition, and return the currently altered fire regime to a fire regime that more closely parallels the historical fire regime. See Chapter 2 for DFC by vegetation type.</p> <p><b>Prioritization Criteria:</b> The following would be the top two priorities under all action alternatives:</p> <ol style="list-style-type: none"> <li>1. Fire-fighter and public safety are the first priorities in response to fire suppression. At no time will the activities described in this EIS compromise fire-fighter and public safety.</li> <li>2. Protection of property and Wildland Urban Interface (WUI).</li> </ol> <p>WUI areas were identified in the National Fire Plan as areas requiring protection and are common to all alternatives. Communities-at-risk were identified and WUI areas are designated through County/City Mitigation plans initiated by local fire chiefs and through statewide interagency planning efforts. WUI areas exist around communities-at-risk (as defined in Federal Register Notice, Volume 66, August 17, 2001). The National Fire Plan mandates that priority be given to protecting these communities from wildland fire and to preventing fires started on private lands from spreading to public lands. In all alternatives developed including the No Action, WUI areas would take precedence if suppression resources are limited and life and property are threatened. Vegetation treatments in and around the WUI will be designed to mitigate fire hazard. Site-specific National Environmental Protection Act (NEPA) documentation would be required for all federally funded projects, regardless of ownership.</p> <p>Vegetation treatment priorities would vary by field office as vegetation types vary across the planning area. In general, vegetation treatment priorities include the following:</p> <ul style="list-style-type: none"> <li>• Diversify Perennial Grass to speed reestablishment of sagebrush cover</li> <li>• Enhance structural and species diversity in degraded Low-elevation sagebrush steppe</li> <li>• Reduce shrub and Juniper density in Mid-elevation Shrub</li> <li>• Reduce invasive or noxious weeds in all vegetation types</li> </ul>			

<b>TABLE 1. BENNETT HILLS – TIMMERMAN HILLS MANAGEMENT FRAMEWORK PLAN</b>					
<b>Management Direction</b>	<b>Alternative A - No Action</b>	<b>Alternative B</b>	<b>Alternative C</b>	<b>Alternative D</b>	<b>Alternative E (Proposed Plan Amendment)</b>
		<ul style="list-style-type: none"> <li>• Rejuvenate Aspen stands, reduce insect infestation and disease, and create a diversity of forest successional stages across the landscape</li> <li>• In Mountain Shrub, rejuvenate old, decadent shrubs and increase cover and density of desirable herbaceous species</li> <li>• Restore historical successional processes in vegetated rock/lava</li> </ul> <p><b>Management Restrictions:</b> Appendix Q lists additional restrictions that are common to all action alternatives.</p>			
<b>Fire Management Goals And Objectives</b>	1) Emphasize protection from and rehabilitation after wildland fire within the WUI.	1) Make progress toward DFC in Low-elevation Shrub, Perennial Grass, and Invasive Annual Grass vegetation types where wildland fire should occur less frequently and at a smaller scale on the landscape than it currently does.	1) Make progress toward DFC in Low-elevation Shrub, Perennial Grass, and Invasive Annual Grass vegetation types so that wildland fire occurs less frequently and at a smaller scale on the landscape than it currently does. Reduce by half the number of wildland fires in these vegetation types to create a wildland fire regime within the historical range of variability.	1) Make progress toward DFC in the Low-elevation Shrub, Perennial Grass, Invasive Annual Grass, Mid-elevation Shrub, Mountain Shrub, and Juniper plant vegetation types.	1) Make progress toward DFC in the Low-elevation Shrub, Perennial Grass, Invasive Annual Grass, Mid-elevation Shrub, Mountain Shrub, and Juniper vegetation types.

<b>TABLE 1. BENNETT HILLS – TIMMERMAN HILLS MANAGEMENT FRAMEWORK PLAN</b>					
<b>Management Direction</b>	<b>Alternative A - No Action</b>	<b>Alternative B</b>	<b>Alternative C</b>	<b>Alternative D</b>	<b>Alternative E (Proposed Plan Amendment)</b>
	<p>2) Reduce fine fuels and undesirable non-native plants to create perennial cover types so that wildland fire occurs less frequently and at a smaller scale on the landscape than it currently does.</p> <p>3) Conduct fire and non-fire vegetation treatments in Mid-elevation Shrub, Juniper, Dry Conifer, Aspen/Conifer, and Mountain Shrub.</p>	<p>2) Make progress toward DFC in the Mid-elevation Shrub, Juniper, Dry Conifer, Aspen/Conifer, and Mountain Shrub vegetation types where wildland fire should occur more frequently on the landscape than it currently does.</p> <p>3) Maintain or make progress toward DFC in the Wet/Cold Conifer, Salt Desert Shrub cover types, and in vegetation types where fire frequencies are within the historical range of variability.</p>	<p>2) Make progress toward DFC in the Mid-elevation Shrub, Juniper, Dry Conifer, Aspen/Conifer, and Mountain Shrub vegetation types by increasing the use of wildland fire and RxFire to create a fire regime within the historical range of variability.</p> <p>3) In Wet/Cold Conifer, Riparian, Salt Desert Shrub, and Other/Vegetated Lava vegetation types and/or areas in Fire Regime Condition Class (FRCC) 1, maintain vegetation conditions using mechanical, chemical, prescribed fire, or wildland fire use (WFU) treatments, such that wildland fire regimes are within the historical range of variability (i.e., maintain the current fire regimes in these</p>	<p>2) Maintain, protect, and expand sage grouse Source Habitats.</p> <p>3) Treat sage grouse Key and Restoration Habitats to expand Source Habitats. Improve and maintain sage grouse Restoration (R1-3) and Key Habitats.</p>	<p>2) Maintain, protect, and expand sage grouse Source Habitats.</p> <p>3) Treat sage grouse Key and Restoration Habitats to expand Source Habitats. Improve and maintain sage grouse Restoration (R1-3) and Key Habitats.</p>
