BILLINGS – Bonus bids topped \$1,136,000 at the Bureau of Land Management’s May 31 bi-monthly oil and gas lease sale in Billings.

Summitt Resources of Calgary, Alberta, submitted an \$846,000 bid for leasing rights on a 1,879-acre Forest Service parcel in McKenzie County, N. D. That was the highest bid in the sale.

Of the 39 parcels offered, 18 were in Montana, 19 were in North Dakota and two were in South Dakota. All of the offered parcels received bids except for four in Montana.

Receipts from federal oil and gas leases are shared with the state or county where the lands are located. All leases are issued for a 10-year term.

Competitive oil and gas lease sales are generally conducted every other month (January/March/May/July/September/November) at BLM’s Montana State Office. Additional information regarding competitive sale lists, detailed results of sales, or the leasing process is available by writing the Bureau of Land Management, P.O. Box 36800, Billings, Mont., 59107, by calling (406) 896-5004, or at [www.mt.blm.gov/oilgas/leasing/index.html](http://www.mt.blm.gov/oilgas/leasing/index.html).

Less than one percent of the BLM-managed acreage nationally is disturbed by oil and gas activity. To minimize impacts (the “footprint”) on the land, the Forest Service and BLM analyze the potential environmental effects from exploration and development before offering any leases for sale. All leases come with conditions on oil and gas activities to protect the environment that can include limits on when drilling can occur or restrictions on surface occupancy. Once an

operator proposes exploration or development on a BLM-issued lease, the further environmental analysis under the National Environmental Policy Act is conducted to determine the site-specific need for various types of impact-limiting or mitigation measures. In addition, many operators routinely use Best Management Practices such as remote sensing to minimize surface impacts during production monitoring.
