

APPENDIX N

LAND PATTERN ADJUSTMENT CRITERIA AND INITIAL CATEGORIZATION

This appendix presents general guidance for the land pattern adjustment program, specific criteria used to assess the manageability and resource values of individual tracts, and an initial categorization of tracts for retention or disposal under each alternative (Tables N-1 and N-2).

General Program Guidance

The following criteria are based on objectives and criteria presented in the 1984 supplement to the Montana BLM State Director's Guidance — Land Pattern Review and Land Adjustment. These objectives and criteria are used, to varying extents, as general guidance under all alternatives.

Objectives of Land Pattern Adjustment

Land pattern adjustment decisions will be made after thorough analysis and study of land use potential and should achieve the following long-term objectives:

1. To retain those public lands having significant public values; acquire (by exchange) other lands which will contribute significantly to accomplishing public land management objectives.
2. To adjust the BLM land pattern to get the highest public value.
3. To identify and transfer those public lands which could attain a higher and better use in the private sector or if managed by another public agency.

Retention Criteria

Manageable lands containing the following values will be retained:

1. Wetlands and riparian areas determined to come under the definition of EO 11990.
2. Areas of national economic significance such as designated mineral resource areas where the disposal of the surface would interfere with the logical development of the mineral estate.
3. Areas where management is cost-effective or lands containing other important characteristics and public values which can best be managed in public ownership by BLM, including but not limited to:
 - a. strategic tracts along rivers, streams, lakes, ponds, springs, and trails;
 - b. important hunting or fishing areas;
 - c. recreation sites and areas;
4. Lands with a combination of broad multiple-use values.
5. Areas where future plans will lead to further consolidation and improvement of land patterns and reduce the costs of management.
6. Public lands withdrawn by the BLM for which the purpose of the withdrawal remains valid and the resource uses can be managed by BLM concurrently.

7. Public lands which provide public access and contain previously mentioned public values which, when considered together, warrant their retention.

Disposal Criteria

Disposal decisions will be made in the public interest based upon the following criteria:

1. Lands specifically identified through land use plans for sale, exchange, transfer or R & PP Act applications.
2. Lands of limited public value.
3. Widely scattered parcels which are difficult for BLM to manage with anything beyond minimal custodial administration.
4. Lands with high public values proper for management by other federal agencies, or state or local government.
5. Lands which will service important public objectives (such as community expansion) if outside of BLM administration.
6. Lands where disposal would aid in aggregating or repositioning other public lands or public land resource values in retention areas to facilitate national, state, and local objectives.
7. Lands with long-term unauthorized use problems, and which are not required for specific public purposes.
8. Lands where disposal would increase the range of economic opportunities provided to the general public.
9. Lands in which the highest value or most appropriate long-term use is agriculture, or commercial or industrial development.
10. Lands involved in BLM/USFS jurisdictional transfer and ongoing exchanges.

Selection Criteria

All acquisition proposals will be evaluated to determine if the selected lands would:

1. Facilitate access to areas retained for long-term public use.
2. Enhance congressionally designated areas, rivers, or trails.
3. Facilitate national, state and local BLM priorities or mission statement needs.
4. Facilitate implementation and/or be consistent with BLM land use and activity plans.
5. Stabilize or enhance local economies or values.
6. Meet long-term public land management goals.
7. Be of sufficient size to improve use of adjoining public lands or, if isolated, large enough to allow the identified potential public land use.
8. Allow more diverse use, more intensive use, or a change in uses to better fulfill the Bureau's mission.

9. Maintain or enhance important and recognized public land values. Especially noteworthy are identified, designated, special, or high interest areas, or values identified in State Comprehensive Outdoor Recreation Plans.
10. Enhance the opportunity for new or emerging public land uses or values.
11. To contribute to a wide spectrum of uses or a large number of public land users.
12. To facilitate management practices, uses, scale of operations or degrees of management intensity that are viable under economic program efficiency standards.
13. To secure for the public significant water-related land interests. These interests include lake shore, river front, stream, pond, or spring sites.

Site-Specific Evaluation Criteria

All proposed disposal and acquisition actions will be subject to a detailed environmental analysis prior to a final decision. In addition to meeting the general objectives and criteria presented above, each disposal or acquisition will be measured against the site-specific criteria presented below. The criteria include both manageability and resource quality factors. The criteria are grouped according to the relative importance an individual criterion would have in the decisionmaking process.

High Relative Weight

Lands are in close proximity (eg., within 150 miles) to the Dickinson District Office.

Lands are in close proximity (eg., within 25 miles) to known retention lands.

Parcels or contiguous parcels are large enough to manage effectively (eg., 320 acres or larger).

Potential exists for intensive management through activity planning (eg., AMP, HMP, Watershed Management Plan (WMP), etc.).

There is a willing party for sale or exchange.

There is potential for unauthorized use to continue undetected given present funding and staffing (negative factor).

Lack of management opportunities due to movement of river channels and periodic flooding (negative factor).

Lands contain high quality riparian vegetation which could be destroyed if transferred from public ownership.

Lands are located along Little Missouri River, Missouri River, or major tributary.

Lands contain threatened or endangered wildlife species habitat.

Rare wildlife species of high interest to the state are present.

Lands provide legal access to other public use areas.

Lands contain noxious weeds (negative factor).

Moderate Relative Weight

Lands are located in 100 year floodplain.

Lands contain wetlands which serve as ground water recharge areas and have potential to be drained if disposed.

Lands with high potential for mineral materials development.

Lands are located within a CSA or coal lease.

Lands contain high quality woody vegetation which could be lost if disposed.

Lands contain high quality native prairie which could be lost if disposed.

Lands serve as high value wildlife habitat because of surrounding agriculturally disturbed lands.

Lands possess value for reduction of sediment or other pollutants which could be lost if disposed.

Lands contain cultural resources eligible or potentially eligible for the NRHP.

Lands contain vertebrate fossils of significant scientific interest.

Lands are located less than 50 miles from city having population greater than 500 persons.

Lands have legal access.

Lands have legal and physical access.

Low Relative Weight

Lands are presently leased or there is an opportunity for issuing a grazing lease.

There is an opportunity to eliminate all public lands in the county (negative factor).

Lands contain authorized range improvements.

Lands are inundated by water (negative factor).

Initial Categorization

Initial categorization of all public lands were completed for all alternatives (Tables N-1 and N-2). These categorizations were based on the general program guidance and site-specific criteria presented above, in combination with the alternative-specific goals, objectives, and actions presented in Chapter Two. Initial categorizations may change as a result of new information found during field examination and environmental analysis. Under Alternative A — No Action, the classifications were determined in previous planning efforts and may not fully reflect the general program guidance or site-specific criteria. No lands were preliminarily identified for disposal in Alternative D; however, individual outside applications would be considered on a case-by-case basis using the appropriate site-specific criteria.

			Lot 2	16.10	D	D	D ²	R
		TOTAL ACREAGE						
							1321.30	

¹Identified as suitable for mitigating impacts of Garrison Diversion projects.

²Need a cadastral survey determination of acreage and land status.

³Located within Big Gumbo or Lost Bridge consolidation areas. Available for exchange for other lands within either consolidation area.

⁴These areas contain or are adjacent to wetlands. Disposal would be contingent on protection of important wetlands values.
