Dear Mr. Amme,

1

I strongly urge you to - Do your job -
Protect Our Public lands by fixing toxics
and supporting non-chemical weed control!

2

Herbicides kill so many non-specific
species - the 18 proposed poisons include
many persistent, mobile chemicals - known for
developmental/reproductive retardants -
into the forests, ranges & waters - No I
don't think so! There are other non-toxic
solutions - it's not worth the severe
risk to workers, natives & the public
recreationalists.

3

Use fire, mechanical, manual, cultural
and biological control methods instead.
Also limit logging, roadbuilding, grazing
etc - this promotes invasives.

4

Your attention to this most urgent
matter would be much appreciated by
all future/present generations of
all species.

Thank you,
