Herd Management Areas (HMA) and Herd Areas (HA) have been placed in separate tables by state.

The population estimation method used for the last two years on most HMAs is the simultaneous double count method.

Most of the 177 HMAs have been counted with this method. Ground counts are still done on smaller areas where animals are easier to identify.

Populations do not reflect any changes after March 1, 2016 (i.e. foal crops or gathers).

BLM policy is to establish Appropriate Management Levels (AML) as a range with upper and lower levels.

Acres have been calculated using current digitized (GIS) maps using the UTM (Universal Transverse Mercator) projections.

Acreage transferred from BLM to another agency are not deducted from the HA acreage.

HA acreage totals are calculated based on designations made in the early 1970's.

4. Three Rivers Complex - AML-509; includes Alamo, Big Sandy, Havasu HMAs.
5. % of AML: If estimated population is above High AML, this value is the estimated population divided by the High AML (as a percentage of High AML). If estimated population is below Low AML, this value is the estimated population divided by the Low AML (as a percentage of Low AML). "Within AML" means that the estimate is between Low AML and High AML.
8. Populations estimate in Cibola-Trigo were incomplete due to military flight restrictions.

- High End AML is reported as the maximum number of animals sustainable on a yearlong basis.
- Most Recent Year @ AML is the last time AML was achieved on the HMA.
- HMAs created from other HAs will not have acres in the HA columns.
- Fort Sage AML is established in both CA (29) & NV (36); administered by CA.
- % of AML: If estimated population is above High AML, this value is the estimated population divided by the High AML (as a percentage of High AML). If estimated population is below Low AML, this value is the estimated population divided by the Low AML (as a percentage of Low AML). "Within AML" means that the estimate is between Low AML and High AML.
- Black Rock East and West have been combined into Black Rock Range per the Winnemucca RMP; 2015. Acres will be adjusted by next FY using GIS.
- Shawave Mountains and Nightengale Mountains have been combined into Shawave Mountains per the Winnemucca RMP; 2015. Acres will be adjusted by next FY using GIS.

1. High End AML is reported as the maximum number of animals sustainable on a yearlong basis.
2. Most Recent Year @ AML is the last time AML was achieved on the HMA.
3. HMAs created from other HAs will not have acres in the HA columns.
4. % of AML: If estimated population is above High AML, this value is the estimated population divided by the High AML (as a percentage of High AML). If estimated population is below Low AML, this value is the estimated population divided by the Low AML (as a percentage of Low AML). "Within AML" means that the estimate is between Low AML and High AML.
6. The reported population shown is based on the actual number of animals seen during an aerial survey and has not yet been statistically analyzed. When the analysis is complete, additional animals not seen could be added to the population number shown.
