OF THE SURVEY OF

part of the West boundary,

and part of the Subdivision lines of

Township 32 North, Range 7 West,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

Dupree R. Averill, U. S. Surveyor,

and

James C. O'Brien, U. S. Transitman,

In the capacity of U. S. Surveyor, under Special Instructions dated February 24, 1920,

issued by the United States Surveyor General to govern surveys included in Group

No. 105, Arizona, which were approved by the Commissioner of the General Land

Office, March 8, 1920, and Assignment Instructions dated March 27, 1920

Red lines on above diagram indicate surveys executed by Dupree R. Averill, U. S. Surveyor, on dates shown thereon.

Blue lines on above diagram indicate surveys executed by James C. O'Brien, U. S. Transitman, on dates shown thereon,

Surveys hereinafter described, executed on dates shown on diagram on page 2 hereof, by Dupree R. Averill, U.S. Surveyor, and James C. O'Brien, U.S. Transitman, using respectively, Buff solar transit No. 9223, and Young and Sons mountain transit No. 8541. Each instrument is equipped with full vertical circle, and the Smith solar attachment, unless otherwise specified all azimuth determinations are accomplished with the solar attachments.

FIELD TESTS OF INSTRUMENTS.

August 1, 1920. We examine the adjustment of each instrument, and correct all errors; then, to test the solar apparatus by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by Polaris observation, proceed with each instrument as follows:

In camp near SE. corner of sec. 18, T. 31 N., R. 7 W., Gila and Salt River Base and Meridian, Arizona, in latitude, $36^{\circ} 4' N.$, longitude, $113^{\circ} 04' W.$, at 10h. 55m. p.m., l.m.t., observe Polaris at Eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 5 chs. N.

Azimuth of Polaris at eastern elongation = $1^{\circ} 23' 20''$.

August 2, 1920: Lay off the azimuth of polaris $1^{\circ} 23'$ to the west, and mark a point in the meridian thus determined by a tack in a peg driven firmly in the ground, 5 chs. N.

At 9h. 00m., a.m., l.m.t., set off $36^{\circ} 04'$ on the lat. arc; $17^{\circ} 44\frac{1}{2}' N.$ on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged, observe the sun on the meridian; the resulting reading of the decl. arc is $17^{\circ} 42\frac{1}{2}' N.$, which agrees with the computed declination of the sun.

At 3h. 00m. p.m., l.m.t., with the lat. arc unchanged, set off $17^{\circ} 41' N.$ on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations made with both instruments during the usual hours of solar work come within $1' 30''$ of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

Unless otherwise specified, all measurements are made with Lufkin steel tapes, 5 chs. in length, compared with a Chesterman standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

The W. 1/2 of the line passes over steep broken slopes on the walls of the Mohawk Canyon, and chaining is impracticable; therefore, triangulate the measurement of a portion of the random sec. line, as described as follows, and as shown on the diagram hereon:

Set flag ahead on random line at top of cliffs, on E. wall of canyon. From cor. of secs. 23, 24, 25 and 26, measure a Base, N. 0° 1' W., 9.73 chs. on sec. line, bet. secs. 23 and 24. From N. end of Base, flag brs. S. 78° 33' E.

Included angles are 78° 32', 11° 29' and 89° 59', the sum of which is 180° 00'.

Triangulated dist. on random sec. line is obtained by $\frac{\text{sine } 78^\circ 32' \times \text{Base}}{\text{sine } 11^\circ 29'}$ or $\frac{.98004 \times 9.73}{.19908} = 47.90$ chs.

Triangulated measurement on random sec. line is obtained by $\frac{\sin 67^\circ 07' \times \text{Base}}{\sin 22^\circ 54'}$ or $\frac{.92130 \times 20.05}{.38912} = 47.47$ chs.

of the sec. line passes over NE. and E. faces of cliffs on W. wall of canyon, rendering chaining impracticable; therefore, obtain the measurement of such portion of the line by traverse, along rim of canyon in sec. 22, as described as follows, and as shown on the diagram hereon:

From 11.23 ch. station on sec. line,
N. 26 1/4° W., 18.60 chs.

Thence,
N. 20° E., 6.32 chs.

Thence,
N. 14 1/2° W., 6.35 chs.

The latitude and departure of the above described traverse is 28.77 chs. N., and 7.66 chs. W.

The terminus of the traverse is therefore 11.23 chs. + 28.77 chs. = 40.00 chs. N. of E. and W. line, thru. sec. cor.

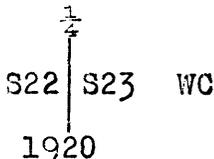

The departure of the sec. line in 28.77 chs. being 0.01 chs. W., the terminus of the traverse is therefore, 7.65 chs. west from

40.00 True point for 1/4 sec. cor. of secs. 22 and 23 on E. face of cliffs.

From traverse point, chain measurement East, 3.05 chs. descending 150 ft., over E. slope to top of cliff, at 4.60 chs. West from true point for 1/4 sec. cor.

This being the nearest accessible point to the 1/4 sec. cor. point, establish witness cor. here as follows:

Set an iron post 3 ft. long, 1 in. in diam., 20 ins. in the ground for witness cor. to the 1/4 sec. cor., marked on brass cap,

from which,

A pine, 16 ins. in diam., brs. S. 35° W., 335 lks. dist., marked WC 1/4 S 22 BT.

A pine, 12 ins. in diam., brs. N. 31° W., 387 lks. dist., marked WC 1/4 S 23 BT.

From traverse point 7.65 chs. West of the true point for 1/4 sec. cor., traverse along rim of canyon thru. N. 1/2 of sec. 22, as described as follows:

N. 6° 00' W., 12.00 chs.

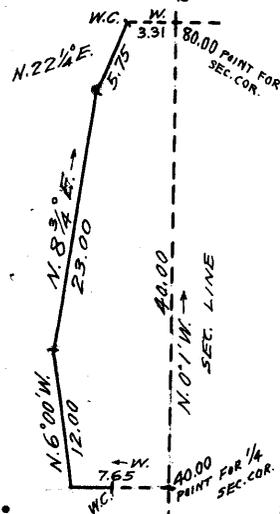

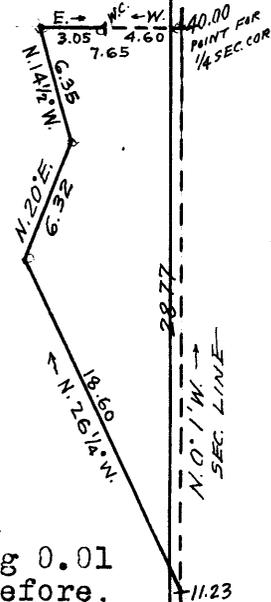

Thence,
N. 8 3/4° E., 23.00 chs.

Thence,
N. 22 1/4° E., 5.75 chs.

The latitude and departure of the traverse thru. the N. 1/2 of sec. 22, described above is 40.00 chs. N., and 4.33 chs. E.

The departure of the sec. line in 40.00 chs. being 0.01 chs. W., the terminus of this traverse is therefore, 7.65 chs. - 4.33 chs. - 0.01 chs. = 3.31 chs. West from

The point for cor. of secs. 14, 15, 22 and 23 is inaccessible, and the West half of the line passes over cliffs which render chaining impracticable; therefore, triangulate the measurement of the entire line as described as follows, and as shown on the diagram hereon:

A flag at 20.05 ch. station on sec. line, bet. secs. 13 and 14 bears N. $76^{\circ}27\frac{1}{2}'$ E., and gives a base for this triangulation of N. $0^{\circ}1'$ W., 20.05 chs.

Included angles are $13^{\circ}31\frac{1}{2}'$, $76^{\circ}28\frac{1}{2}'$ and $90^{\circ}00'$ the sum of which is $180^{\circ}00'$.

Triangulated measurement is obtained by

Tang. $76^{\circ}28\frac{1}{2}'$ x Base or $4.15731 \times 20.05 = 83.35$ chs.

The W.C. being 3.31 chs. W. from point for cor. of secs. 14, 15, 22 and 23, the true length of sec. line bet. secs. 14 and 23 is 83.35 chs. - 3.31 chs. = 80.04 chs.

Triangulated measurement on sec. line is obtained by Tang. 64° 51' x Base or 2.12993 x 6.49 = 13.82 chs., which added to 9.17 chs. gives 22.99 chs. West from sec. cor. for the position of the flag on sec. line.

19.55 N. 89° 47' E., on a random line, bet. secs. 3 and 10. W. rim of canyon, brs. N. and S. The line beyond this point passes over cliffs, facing E., rendering chaining impracticable; therefore, triangulate as described as follows, and as shown on the diagram hereon:

Set flag at 19.55 ch. station. From a point ahead on random sec. line on E. wall of canyon, measure a Base, N. 0° 13' W., 18.11 chs. From N. end of Base, flag brs. S. 64° 52' W.

Included angles are 65° 05', 90° 00' and 24° 55', the sum of which is 180° 00'.

Triangulated measurement on random sec. line is obtained by Tang. 65° 05' x Base or 2.15268 x 18.11 = 38.98 chs., which added to 19.55 chs. gives 58.53 chs., N. 89° 47' E. from cor. of secs. 3, 4, 9 and 10 for the position of the triangulation point.

 56.68 E. upper rim of Prospect Valley, brs. NW. and SE., at top of spur, sloping NW. Beyond this point, the line passes over two series of cliffs, facing NE. and chaining is impracticable; therefore, triangulate as described as follows, and as shown on the diagram hereon:

Set flag ahead on sec. line, at top of second series of cliffs, indicated on diagram at "C."
 From 56.68 ch. station indicated at "A," measure a Base, N.0° 3' 40' W., 2.58 chs. to point "B."
 From point "D" ahead on sec. line beyond and near the foot of second series of cliffs, measure a Base, S.89° 57' W., 7.53 chs. to "E."
 Bearing "B-C" = N.9° 42' E.
 Bearing "E-C" = S.40° 23' E.

Vertical angle "A" to "C" = -30°.
 Vertical angle "C" to "D" = -43½°.
 Included angles of triangle "A-B-C" are 63° 37', 106° 38' and 9° 45', the sum of which is 180° 00'.
 Included angles of triangle "C-D-E" are 40° 20', 90° 00' and 49° 40', the sum of which is 180° 00'.
 Triangulated measurement "A-C" is obtained by

 Flag point "C" of above described triangulation, at top of series of cliffs, bearing NW. and SE. facing NE. This point is about 560 ft. below 56.68 ch. station. Triangulated measurement "C-D" is obtained by

ble; therefore, triangulate the measurement as
described as follows, and as shown on the diagram
hereon:

Chains.

Set a flag at 13.23 ch. station on random line, indicated on diagram at "A."
 Set another flag ahead on random line at W. rim of canyon at "D."
 From a point on random line beyond base of cliffs indicated at "B," measure a Base S.0°0' W., 7.00 chs. to point "C."

Bearing "C-A" = N.78° 29' E.
 Bearing "C-D" = N.68° 38' W.
 Vertical angle "A" to "B." = - 17°.
 Vertical angle "B" to "D" = - 9°.
 Included angles of triangle "A-B-C" are 11° 37', 78°23' and 90°00', the sum of which is 180°00'.
 Included angles of triangle "B-C-D" are 90°00', 68° 44' and 21°16', the sum of which is 180°00'.

Triangulated measurement on random line "A" to "B" is obtained by

Tang. 78° 23' x Base or 4.86444 x 7.00 = 34.05 chs., which added to 13.23 chs. gives 47.28 chs. N.89°54' W. from sec.cor. for the position of triangulation point "B."

Triangulated measurement on random line "B" to "D" is obtained by

Tang. 68°44' x Base or 2.56928 x 7.00 = 17.98 chs., which added to 47.28 chs. gives 65.26 chs. N.89°54' W., from sec.cor. for the position of flag point "D."

From triangulation point at 47.28 ch. station, chain measurement,

40.00 S.89°54' E., 7.28 chs. to Set temp. 1/4 sec.cor.

FINAL FIELD TESTS OF INSTRUMENTS, 1920.

Sept. 3, 1920. We examine the adjustment of each instrument, and correct all errors; then, to test the solar apparatus by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by Polaris observation, proceed with each instrument as follows:

In camp in SE. $\frac{1}{4}$ of sec. 14, T. 31 N., R. 7 W.; Gila and Salt River Base and Meridian, Arizona, in latitude, $36^{\circ}04\frac{1}{2}'$ N., and longitude $113^{\circ}00'$ W., at 8h. 44.0m., p.m., l.m.t. observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined on a peg driven firmly in the ground 5 chs. N.

Sept. 4, 1920. At 9h. 00m. a.m., l.m.t., set off $36^{\circ}04\frac{1}{2}'$ N. on the lat. arc; $7^{\circ}09'$ N. on the decl. arc, and determine a meridian with the solar which agrees with the true meridian.

At app. noon, with the lat. arc unchanged, observe the sun on the meridian; the resulting reading of the decl. arc is $7^{\circ}06'$ N., which agrees with the computed decl. of the sun.

At 3h. 00m. p.m., l.m.t., with the lat. arc unchanged, set off $7^{\circ}03\frac{1}{2}'$ N. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations made with both instruments during the usual hours of the solar work come within $1' 30''$ of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

NOTE:

It was impracticable to complete the survey of the north tier of sections in this township owing to the extremely rough and mountainous nature of the surface therein.

GENERAL DESCRIPTION.

This township lies entirely within the Hualpai Indian Reservation, near the S. upper rim of the Colorado River Canyon. The surface of the east two ranges, of secs. is broken and mountainous, being on the walls of Mohawk Canyon. The west two ranges of secs. are in the Prospect Valley, where the surface varies from nearly level to broken and mountainous, the bottom of the valley, bearing N. and S. along the W. bdy. of the township being nearly level and rolling, a bench bearing N. and S. on the E. side of the valley being rolling and broken, and the remainder of the surface in the valley being broken and mountainous. The central two ranges of sections, which are situated between Mohawk Canyon and Prospect Valley have a gently rolling and broken surface.

The drainage of the township is carried in about equal proportions by Mohawk Canyon and Prospect Valley, both draining north into the Colorado river.

The soil in Mohawk Canyon, and the steeper slopes of Prospect Valley, is rocky, 4th rate, and between the canyon and valley, the soil is mainly gravelly, 2nd and 3rd rate. In the bottom of the valley in sec. 18 is a small area, where the soil is sandy, 1st rate.

The timber consists of cedar and pine, which occurs in scattering growth in Mohawk Canyon and the E. side of Prospect Valley, in dense growth between the canyon and valley, and the bottom of Prospect Valley is devoid of timber.

A scattering undergrowth of sage brush, scrub cedar and dogwood is prevalent in all sections.

There is a fair growth of grass between the canyon and valley, and in the bottom of the valley.

There are no settlers, no improvements and no evidence

of valuable mineral.
There is no permanent running water.
No roads traverse the township.
