Of the Dependent Resurvey of the Second Standard Parallel

North, along the South Boundary of Township 9 North,

Through a Portion of Ranges 25 and 26 East,

The West Boundary of Township 8 North, Range 27 East,

A Portion of the Boundary of the

Fort Apache Indian Reservation,

And the Survey of

The South and West Boundaries and Subdivisional Lines of

Fractional Township 8 North, Range 26 East,

Of the Gila and Salt River Meridian,

In the State of Arizona

EXECUTED BY

Theodore Vander Meer, U. S. Transitman.

4102

Under special instructions dated March 28, 1935, which provided

for the surveys included under Group No. 192, bearing the approval of the

Commissioner of the General Land Office under date of May 22, 1935

and assignment instructions dated June 22, 1935

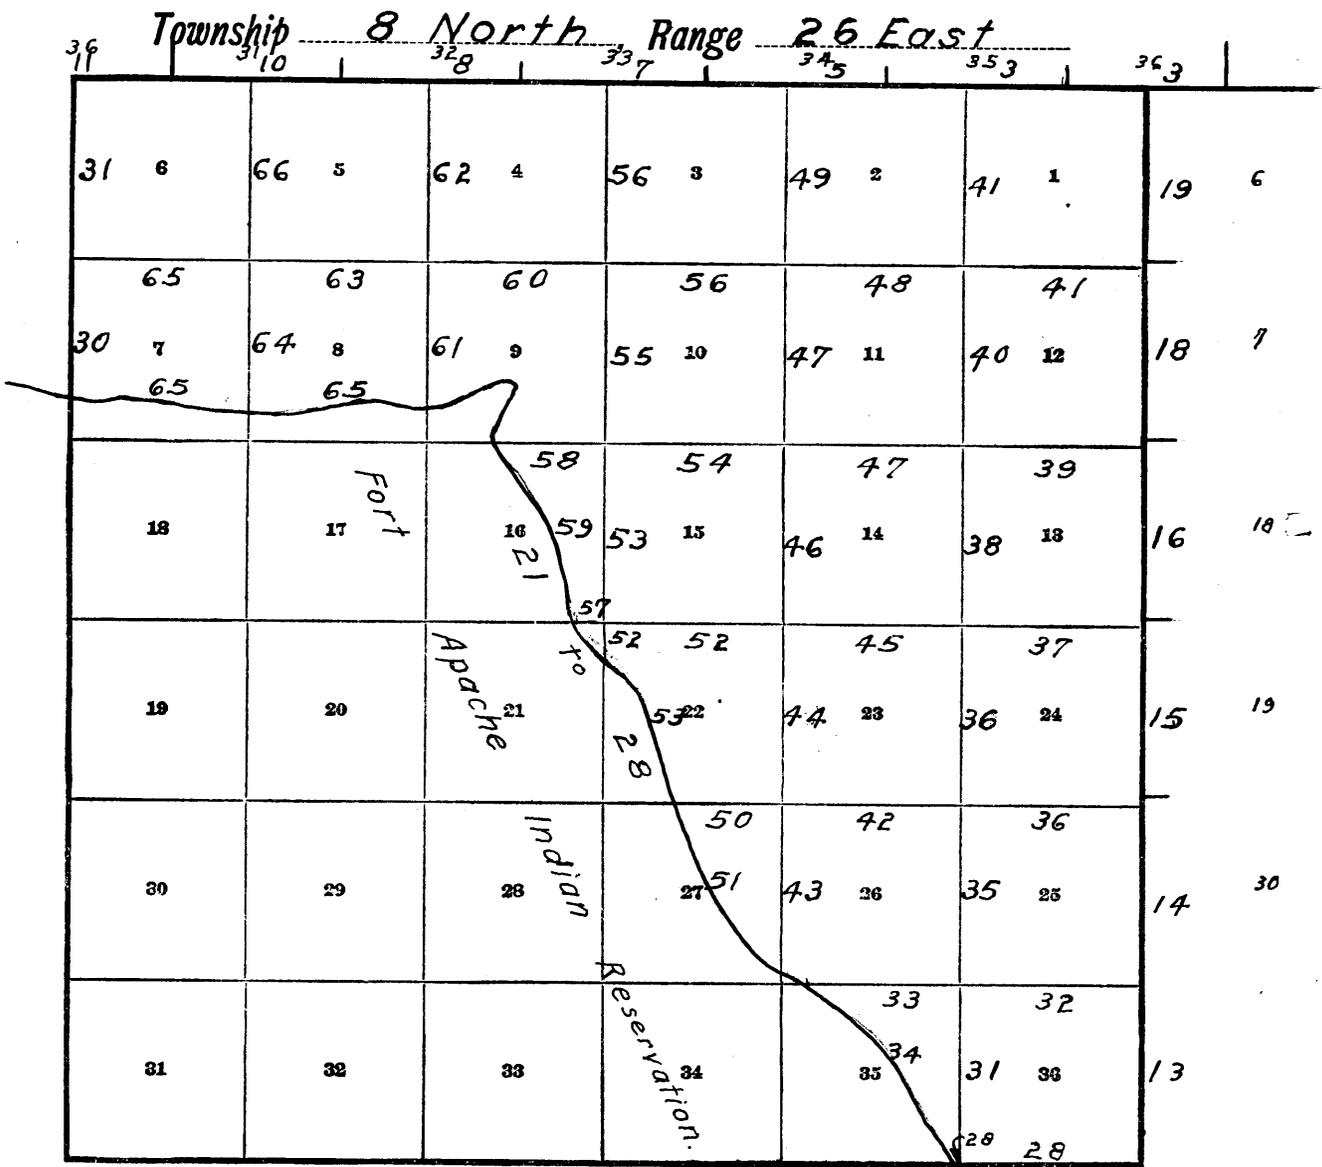

Resurvey and Survey commenced July 3, 1935.

Resurvey and Survey completed August 4, 1935.

BOOK 4102

INDEX DIAGRAM.

T.8 N., R.26 E.

The resurvey of the boundaries and the survey of that part of the subdivision lines of T.8 N., R.26 E., lying outside of the Fort Apache Indian Reservation, was executed with a light-mountain solar transit made by the Buff & Buff Co., constructed in accordance with the standard specifications of the General Land Office. The horizontal circle has a diameter of $4\frac{1}{2}$ ins., with two double verniers reading to single minutes; the vertical circle has a diameter of 4 ins., with one double vernier reading to single minutes. The telescope has fixed stadia wires, ratio 1:100, with a focal constant of 1.2 lks. The instrument is equipped with the improved Smith solar attachment; radius of latitude arc $2\frac{1}{2}$ ins., and of declination arc $3\frac{1}{2}$ ins., each with verniers reading to single minutes. The instrument was in good condition, and having been placed in satisfactory adjustment prior to beginning the resurvey and survey, and tested and found free from appreciable error, was approved by the district cadastral engineer on May 22, 1935.

The directions of the lines were determined by solar transit method. The measurements were made on the slope with a Lallie steel tape, 5 chs. in length, graduated every link for the first 100 lks. and the balance at intervals of 10 lks. The tape was tested by comparison with a Lufkin standard and found correct. The vertical angle of each slope measurement was ascertained with a clinometer in good adjustment or by transit; distances shown in the following notes are the horizontal equivalents.

The data furnished with the special instructions gives the geographic position of the SE. cor. of T.8 N., R.26 E., as follows: latitude $34^{\circ}02'N.$ and longitude $109^{\circ}32'W.$

July 2, 1935, in camp near Cheese Springs, near the $\frac{1}{4}$ sec. cor. of secs. 27 and 28, T.8 N., R.27 E., I make an altitude observation upon the sun for azimuth, making four observations, two each with the telescope in direct and reversed positions, observing opposite limbs of the sun.

Mean watch time of observation, 9^h28^m a.m.

Mean horizontal angle from sun N. to point, $21^{\circ}40'00''$

Mean observed vertical angle, $49^{\circ}30'00''$

Reduced true bearing of point----- $N.71^{\circ}55'E.$

At apparent noon on July 2, I make an altitude observation on the sun for latitude, making two observations each with the telescope in direct and reversed positions alternately on the upper and lower limbs of the sun.

Mean observed altitude----- $79^{\circ}00'45''$

Reduced latitude----- $34^{\circ}04'03''N.$

Every 30 minutes from 1:30 to 4:30 p.m., and from 7:00 to 10:30 a.m. on July 4, I make proper settings on the arcs of the solar attachment and ascertain that the resulting orientation of the instrument, when compared with the meridian established by direct observation on the sun, has a maximum error of less than $1'30''$.

I repeat the tests of the arcs frequently by noon observation and verify the meridional indications at frequent intervals throughout the period of the survey.

The normal magnetic variation is $14^{\circ}55'E.$; local attraction from 12° to 19° was observed.

Resurvey of Part of 2nd Stan. Par., N.,
S. Bdy. of T.9 N., R.26 E.

Chains	<p>The 2nd Stan. Par., N., through R.26 E., was surveyed in 1882 by A.P. Johnson, U.S.D.S. No resurveys are of record. The following notes describe the resurvey of the W. 5$\frac{1}{2}$ miles of the line; description of $\frac{1}{4}$ sec. cors. for sections S. of the line are included.</p> <p style="text-align: center;">-----</p>

patches of 2nd growth.

RESURVEY OF PART OF BOUNDARY OF FORT APACHE INDIAN
RESERVATION

The boundary of the Fort Apache Indian Reservation was
resurveyed in 1906 by J.B. Wright, U.S.D.S., there being
no record of a preceding original survey.

No retracement or further resurvey of the portion of the
bdy. bet. the 16 and 25-mile corners is of record.

The following notes describe a resurvey of most of that
portion of the bdy. adjoining fractional T.8 N., R.26 E.
The work is preliminary to the establishment of corners at
the intersection of sec. and mid-sec. lines of T.8N., R.26
E., with the reservation bdy., the corners being herein-
after described in the notes of the subdivision of that
township. The angle points of the reservation bdy. are
not re-monumented.

Beginning at AP 108 of FAIR Bdy., an aspen, 8 ins. diam.,
with bark scribe marks illegible and almost unrecognizable,
located 25 lks. west of the bdy. fence,

N.25°35'W.

Desc. 123 ft. over NE. slope; through heavy pine, fir and
aspen timber.

6.74 Closing cor. of secs. 2 and 35, set at this point, herein-
after described.

Desc. 178 ft. over N. slope.

17.82 The 16 $\frac{1}{2}$ -mile cor., a lava stone, 14 x 12 x 8 ins., mkd.
NB WITH 16 $\frac{1}{2}$ M, witnessed by a mound of stone to east and
3 aspen bearing trees, as per record.

Thence,

N.23°48'W.,

Desc. 52 ft. over decreasing N. slope.

6.60 Cross to W. side of bdy. fence.

12.20 Cross to E. side of bdy. fence; leave aspen timber; over
gentle E. slope.

27.20 Cross to W. side of bdy. fence.

30.60 Leave timber, bears E. and W.; coarse bunch grass.

Land, gently rolling.

Soil, volcanic loam and adobe, 2nd and 3rd rates.

Timber, pine, fir, aspen and spruce; no undergrowth.

FINAL TEST OF SOLAR ATTACHMENT

Aug. 4, 1935; on the meridian described on page 1, hereof, I set off 34°04' on the lat. arc; 17°24'N. on the decl. arc; and at 8^h00^m a.m., app.t., orient the instrument with the solar; the line of sight agrees with the meridian established by direct observation on the sun.

At 4^h00^m p.m., app.t., with the same lat. setting, I set off 17°19'N. on the decl. arc; and repeat the test of the solar; the line of sight agrees within 1' with the meridian established by direct observation on the sun.

GENERAL DESCRIPTION

Fractional T.8 N., R.26 E., lies about midway between the towns of McNary and Springerville, Ariz. It is about 20 miles from each place on the excellent highway running through the south part of the township.

A little-improved road branches from the highway in sec. 25 and runs north-westerly to the top of Green's Peak in sec. 2, and to the "CC" Ranger Station in sec. 5. Other branch roads reach other parts of the township.

The boundary of the Fort Apache Indian Reservation runs north-westerly through the township, following approximately the divide between the Colorado River and Salt River drainage systems. The portion of the township

Township 8 North, Range 26 E.

surveyed at this time lies on the Colorado River side of that boundary.

The lowest sea-level elevation in the township is about 8,800 in sec. 6, and the highest is Green's Peak, elevation about 10,100, in sec. 2. The land is everywhere rolling in character, except in the vicinity of Green's Peak. A triangulation station, bench-mark and Forest Service lookout tower on the top of that peak are noted in the foregoing notes of the line bet. secs. 2 and 11.

Soil is of volcanic origin, varying from a coarse sand to loam to a light adobe. It is nearly everywhere rather rocky.

The land is about evenly divided between open areas and heavily timbered areas, generally with a sharp dividing line between the two types. There is no readily discernible condition, such as water, soil or topographical, to account for the position of the timbered areas.

The open areas are everywhere covered with a heavy growth of bunch grass, which affords, during the summer months, grazing for a very large number of sheep and cattle.

Water is sufficient for stock-raising purposes, there being several each of small streams, springs and natural ponds or tanks. The supply is well maintained by the heavy snows of winter and almost daily showers of summer.

There are considerable quantities of merchantable pine, fir and spruce timber. It was noted that the timber had been marked by cruisers in secs. 5 and 8, presumably for cutting in the near future for the large sawmill at the town of McNary.

A road-maintenance camp of 3 buildings is located about 6 chs. northerly from the $\frac{1}{4}$ sec. cor. of secs. 25 and 36.

Cabins and stables for fire guards are located in secs. 2 and 5, ordinarily used only during the month of June and part of the months of May or July. The road camp is used periodically during both summer and winter.

The high altitude and cool summer climate give the area possibilities as a summer resort. The alternating grass lands and heavily timbered areas are likely to seem attractive to most people.

There is no mineral.

CERTIFICATE OF UNITED STATES SURVEYOR

I, Theodore Vander Meer, U.S. Transitman, HEREBY CERTIFY upon honor that, in pursuance of special instructions bearing date of the 28th day of March, 1935, received from the district cadastral engineer for Arizona, with assignment instructions dated June 22, 1935, I have resurveyed the Second Standard Parallel North, along the south boundary of Township 9 North, through a portion of Ranges 25 and 26 East, the west boundary of Township 8 North, Range 27 East, a portion of the boundary of the Fort Apache Indian Reservation, and surveyed the south and west boundaries and subdivisional lines of fractional Township 8 North, Range 26 East,

of the G. & S.R. Meridian, in the State of Arizona, which are represented in the foregoing field notes as having been executed by me and under my direction; and that said resurvey and survey has been made in strict conformity with said instructions, the Manual of Instructions for the Survey of the Public Lands of the United States, and in the specific manner described in the foregoing field notes.

Glendale, Calif.
April 3, 1935

Theodore Vander Meer
U.S. Transitman

CERTIFICATE OF APPROVAL

OFFICE OF U.S. SUPERVISOR OF SURVEYS,
Denver, Colorado, June 19, 1936.

The foregoing field notes of the dependent resurvey of the Second Standard Parallel North, along the south boundary of Township 9 North, through a portion of Ranges 25 and 26 East, the west boundary of Township 8 North, Range 27 East, a portion of the boundary of the Fort Apache Indian Reservation, and the survey of the south and west boundaries of fractional Township 8 North, Range 26 East, of the Gila and Salt River Meridian, in the State of Arizona,

executed by Theodore Vander Meer, U.S. Transitman, under special instructions dated March 28, 1935, and assignment instructions dated June 22, 1935, having been critically examined, and the necessary corrections made prior to their certification by the engineer, the said field notes, and the survey therein described, are hereby approved.

U.S. Supervisor of Surveys.

~~CERTIFICATE OF TRANSCRIPT~~

~~I certify that the foregoing transcript of the field notes of the above described surveys in~~
~~is a true copy of the original field notes on file in the public survey office.~~
