FIELD NOTES

~~OF THE SURVEY OF THE~~

of the resurvey of the

North, South and East and West boundaries

and

of the subdivisional lines

of

Township 11 North, Range 19 East,

Of the Gila and Salt River Meridian,

In the State of Arizona

EXECUTED BY

Roger F. Wilson, U.S. Surveyor and

Theodore Vander Meer, Robert H. Fischer and Benjamin J. Mollette,

U.S. Transitmen,

Under special instructions dated May 11, 1928 and Jan. 31, 1936, which provided for the ^{re}surveys included under Group No. 153 & 192, bearing the approval of the Commissioner of the General Land Office under date of June 28, 1928 and Apr. 2, 1936 and assignment instructions dated Oct. 12, 1935 and July 9, and Aug. 12 and 17, 1936.

Survey commenced October 18, 1935.

Survey completed September 2, 1936.

Resurvey commenced October 18, 1935, and executed with Buff light mountain solar transit No. 9977, 1914 model, and Young and Sons solar transit No. 8477, 1909 model.

Resurvey resumed July 14, 1936, and executed with Buff light mountain solar transits Nos. 9984 and 10125, both of 1914 model, and Young and Sons solar transit No. 8477. The instruments are all equipped with the Smith solar attachment and unless otherwise specified, all azimuth determinations are accomplished with the solars. The instruments were in good condition, and having been placed in satisfactory adjustment prior to beginning the survey and tested and found free from appreciable error, were approved by the District Cadastral Engineer on Oct. 12, 1935 and July 9, 1936. All instrumental adjustments were examined before making the field tests hereinafter recorded.

The measurements were made with Lallie and Lufkin steel tapes 5 chs. in length, graduated every link for the first 100 lks. and the balance at intervals of 10 lks. The tapes were tested by comparison with a Lufkin standard steel tape and found correct. The measurements were made on the slope and the vertical angle of each interval was ascertained by a clinometer in good adjustment; the horizontal equivalents are entered in the field note record.

The data furnished with the special instructions gives the geographic position of the SE. cor. of T. 11 N., R. 19 E. as follows: latitude $34^{\circ}17'40''$ N., and longitude $110^{\circ}16'10''$ W.

 Determination of meridian and test of transits
 Nos. 9977 and 8477 by Vander Meer and Mollette.

Sept. 20, 1935, at camp near the $\frac{1}{4}$ sec. cor. of secs. 11 and 14, at 7h50m p.m., l.m.t., we observe Polaris at eastern elongation, making four sights, two each with the telescope in direct and reversed positions, and mark the line with a tack in a stake about 5 chs. N.

Sept. 21, after daybreak, we lay off the azimuth of Polaris $1^{\circ}15'49''$ to the west, and mark the meridian with a tack in another stake about 5 chs. N.

At apparent noon, using transit No. 8477, we make a set of four observations on the sun for latitude, two each with the telescope in direct and reversed positions, centering the sun between the stadia wires. The mean observed vertical angle is $56^{\circ}30'15''$; the reduced latitude is $34^{\circ}21'22''$ N.

On Oct. 13, with transit No. 8477 and on Oct. 16, with transit No. 9977, at half hour intervals from 7 to 10:30 a.m. and from 1:30 to 4:30 p.m., we make proper settings on the arcs of the solar attachments, and ascertain that the resulting orientation of the instruments, when compared with the meridian established by Polaris observation has a maximum error of less than $1'30''$.

 Determination of meridian and test of transits
 Nos. 9984 and 10125 by R.F. Wilson.

July 14, 1936, in camp in the south central part of sec. 11, T. 11 N., R. 19 E., at 8h 59m p.m., by my watch which reads correct 105th meridian time as determined from western union clock at Holbrook at 3:04 p.m., I make an hour angle observation on Polaris, E. of the meridian, making two sights each with the telescope in direct and reversed positions, and measure the angle to the left from a nail in a peg driven firmly in the ground about 5 chs. northerly from my station.

Mean watch time of observation -----	8h 59m
Watch fast of l.m.t. -----	21m 12s
L.M.T. of observation -----	8h 37m 48s
Mean horizontal angle -----	$0^{\circ}40'00''$
Azimuth of Polaris E. of meridian -----	$0^{\circ}45'18''$

Resurvey of the East Bdy. of T.11 N., R.19 E.

Chains Reduced bearing of point on peg ----- N.1°25'18"E.
 Mean observed vertical angle ----- 33°32'30"
 Reduced latitude ----- 34°21'06"

Every hour from 6 to 11 a.m. and from 1 to 6 p.m., I make proper settings on the arcs of the solar attachments and ascertain that the resulting orientation of the instruments, when compared with the meridian established by observation on Polaris, has a maximum error of less than 1'30". I repeat the tests at frequent intervals throughout the survey.

 Test of Transits Nos. 9984 and 8477 by
 Mollette and Fischer.

August 24, 1937, at camp in sec. 11, on the meridian previously established by R.F. Wilson, at 9h 00m a.m., app.t. we set off 34°21'N. on the latitude arcs, 11°00½'N. on the declination arcs, and orient the instruments with the solar attachments. The lines of sight agree with the meridian established by observation on Polaris.

At 3h 00m p.m., app.t., with the latitude arcs unchanged, we set off 10°55½'N. on the declination arcs and again orient the instruments with the solar arcs. These lines of sight also agree with the Polaris meridian.

The mean observed magnetic declination is about 15°E., but varies some with local attraction.

The E. bdy. of T.11 N., R.19 E. was surveyed in 1882 by H.A. Coe. No retracement or resurvey is of record. The following notes describe a resurvey of this line.

 Note: The random lines in this resurvey were run on courses computed from the retracements made during the investigation in 1935.

Resurvey of Subdivisions of T.11 N., R.19 E.

The subdivisional survey of this township was made by H.A. Coe, U.S. Deputy surveyor in 1883. The boundaries of sec. 28 were retraced in 1914, by the U.S. Forest Service. No other retracement or resurvey is of record. The following notes describe a resurvey of the subdivisional lines of this township.

The lost cor. of secs. 28, 29, 32 and 33 was reestablished by the method of double proportion, between the four adjacent $\frac{1}{4}$ sec. corners. All of the lost $\frac{1}{4}$ sec. cors. were reestablished by single proportion which is the mid-point except on the N. tier and W. range of sections. The random lines are omitted in the transcript.

From the cor. of secs. 1, 2, 35 and 36, ^{on the S. bdy. of the tp} hereinbefore described,

N. 0° 27' W., bet. secs. 35 and 36.

Over rolling land, through open timber.

FINAL TEST OF SOLAR ATTACHMENTS.

September 2: At camp near the $\frac{1}{4}$ sec. cor. of secs. 11 and 14, T.11 N., R.19 E., at 8h 30m a.m., app.t., we set off $34^{\circ}21'N.$ on the latitude arcs; $7^{\circ}51'N.$ on the declination arcs of instruments Nos. 10125, 9984 and 8477, and orient the instruments with the solar attachments. The line of sight as determined by each instrument agrees with the meridian as established by Polaris observation.

At 3h 00m p.m., app.t.; we set $34^{\circ}21'N.$ on the latitude arcs; $7^{\circ}45'N.$ on the declination arcs, and repeat the tests of the solars; the resulting line of sight of each instrument agrees with the meridian established by Polaris observation.

September 2, 1936.

GENERAL DESCRIPTION.

This township is situate on the north side of the divide between the Salt and Little Colorado Rivers. The elevation of the township is about 5,800 to 6,200 ft. above sea level. The surface of the township ranges from level to rolling mountainous, the western part being the roughest.

The timber for the most part consists of yellow pine, black pine, pinyon pine, juniper, and oak. Aside from the scrub timber, there is little undergrowth.

A graded highway between Holbrook and Heber passes through the township in an east and west direction. There are numerous other roads for local purposes.

The town of Clay Springs is situate in the south half of section 11; there is a lumber camp in the southwest quarter of section 33 and another one in the southwest quarter of sec. 30; also a few other settlers throughout the township.

There are no permanent streams, the water for domestic use being obtained generally from wells.
