Metes-and-Bounds (EMWA) boundary ..... Pages 5-21

## T. 1 N., R. 12 W., Gila and Salt River Meridian, Arizona

## CHAINS

The following field notes describe the dependent resurvey of a portion of the Gila and Salt River Base Line and a portion of the subdivisional lines and the metes-and-bounds survey of the Eagletail Mountains Wilderness Area Boundary, T. 1 N., R. 12 W., Gila and Salt River Meridian, Arizona.

The history of surveys pertaining to this resurvey is as follows:

Woodbury Abbey, Roy J. Gill and Hans D. Voight surveyed the Gila and Salt River Baseline in 1914-1916. William E. Hiester and Ty White surveyed the north and west boundaries in 1941. Boyd S. Owens surveyed the east boundary and the subdivisional lines in 1964.

The survey was executed in accordance with the specifications as set forth in the Manual of Instructions for the Survey of the Public Lands of the United States, 1973, and the Special Instructions dated April 15, 1998, for Group No. 827, Arizona.

The true meridian direction and length of all lines were determined by real time kinematic global positioning system observations using Trimble 4700 model receivers.

Preliminary to the resurvey, the lines of the prior surveys were retraced and search was made for all corners and other calls of record. Identified corners were remonumented in their original positions. Lost corners were reestablished and remonumented at proportionate positions based on the official record. The retracement data were thoroughly verified and only the true line field notes are given herein.

Geodetic control was derived from second order U.S. Coast and Geodetic Survey triangulation station "MOTTBUSCH 1950", as published by the National Geodetic Survey, NAD 83 (1992). The geographic position of the standard corner of sections 33 and 34 is as follows:

Latitude: 33° 22' 38.74" N.      Longitude: 113° 29' 26.46" W.  
NAD83(1992)

The mean magnetic declination is 12½° E.

---

**GENERAL DESCRIPTION**

---

The Eagletail Mountains Wilderness Area lies about 65 miles west  
of Phoenix near the town of Tonapah, Arizona. Access is by way  
of various roads exiting from Interstate 10.

Terrain ranges from rocky and mountainous to sandy washes in the  
lower elevations. Fauna is typical of the Sonoran desert and  
includes creosote, cacti, paloverde and ironwood. There are  
mule deer, bighorn sheep, and mountain lions in the area.

Elevation is about 1600 feet above sea level.

No recent mining activity was noted.

The mean magnetic declination of 12½° E., was derived from the  
United States Geological Survey computer program GEOMAGIX,  
utilizing the Regional Magnetic Field Model for Epoch 2000 for  
the dates of survey.
