GENERAL DESCRIPTION.

This township consists of level bottom, level plain, rolling and mountainous land. The soil of the bottom land, along Date Creek is a deep, rich, fine, sandy loam, capable of producing abundant crops with irrigation. The soil of the level plain in the southern portion of the township is a deep, loose, coarse, sandy loam, capable of producing abundant crops with irrigation, and may be classed as second rate. The soil of the remaining portion of the township is a loose, coarse, decomposed granite, and can nearly all be classed as second rate.

Except along Date Creek, the township is covered with a growth of cacti, greasewood, ocotilla and yucca. The southeastern portion of the township sustains an especially dense growth of cacti, being almost impenetrable by man.

Mesquite, palo verde and catclaw are found throughout the township. Cottonwood, willow and desert willow, a member of the catalpa family, are found along Date Creek.

No indications of mineral were noted in the township. Water is found in Date Creek in sec.12. The water sinks in the sand of the creek bed, near the  $\frac{1}{2}$  cor. of secs.12 and 13, and does not appear again in the township.

There is one settler in sec.14. In sec.7, Cecil Billingsly has an enlarged homestead claim, and has erected a dirt dam to conserve flood waters for stock raising purposes.

Congress Junction, about eighteen miles distant on the Santa Fe, Prescott and Phoenix Railroad, is the most available outfitting point.
