OF THE RETRACEMENT OF

PART OF THE EAST Boundary of Township 5 South, Range 21 East,

OF THE RESURVEY OF

PART of the EAST Boundary of Township 5 South, Range 21 East,

AND OF THE SURVEY OF

The First Standard Parallel South, thru Part of Range 21 East,

WEST Boundary

North Boundary

and

SUBDIVISION Lines of

Township 5 South, Range 21 East

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

William E. Hiester, U. S. Surveyor,

and

Charles E. Hunter, U. S. Transitman

In the capacity of U. S. Surveyor, under Special Instructions dated June 23, 1926, issued by the District Cadastral Engineer to govern surveys included in Group No. 141, Arizona, which were approved by the Commissioner of the General Land Office, July 13, 1926, and Assignment Instructions dated Jan. 3, 1928.

Retracement,

Resurvey and Survey commenced February 24, 1928.

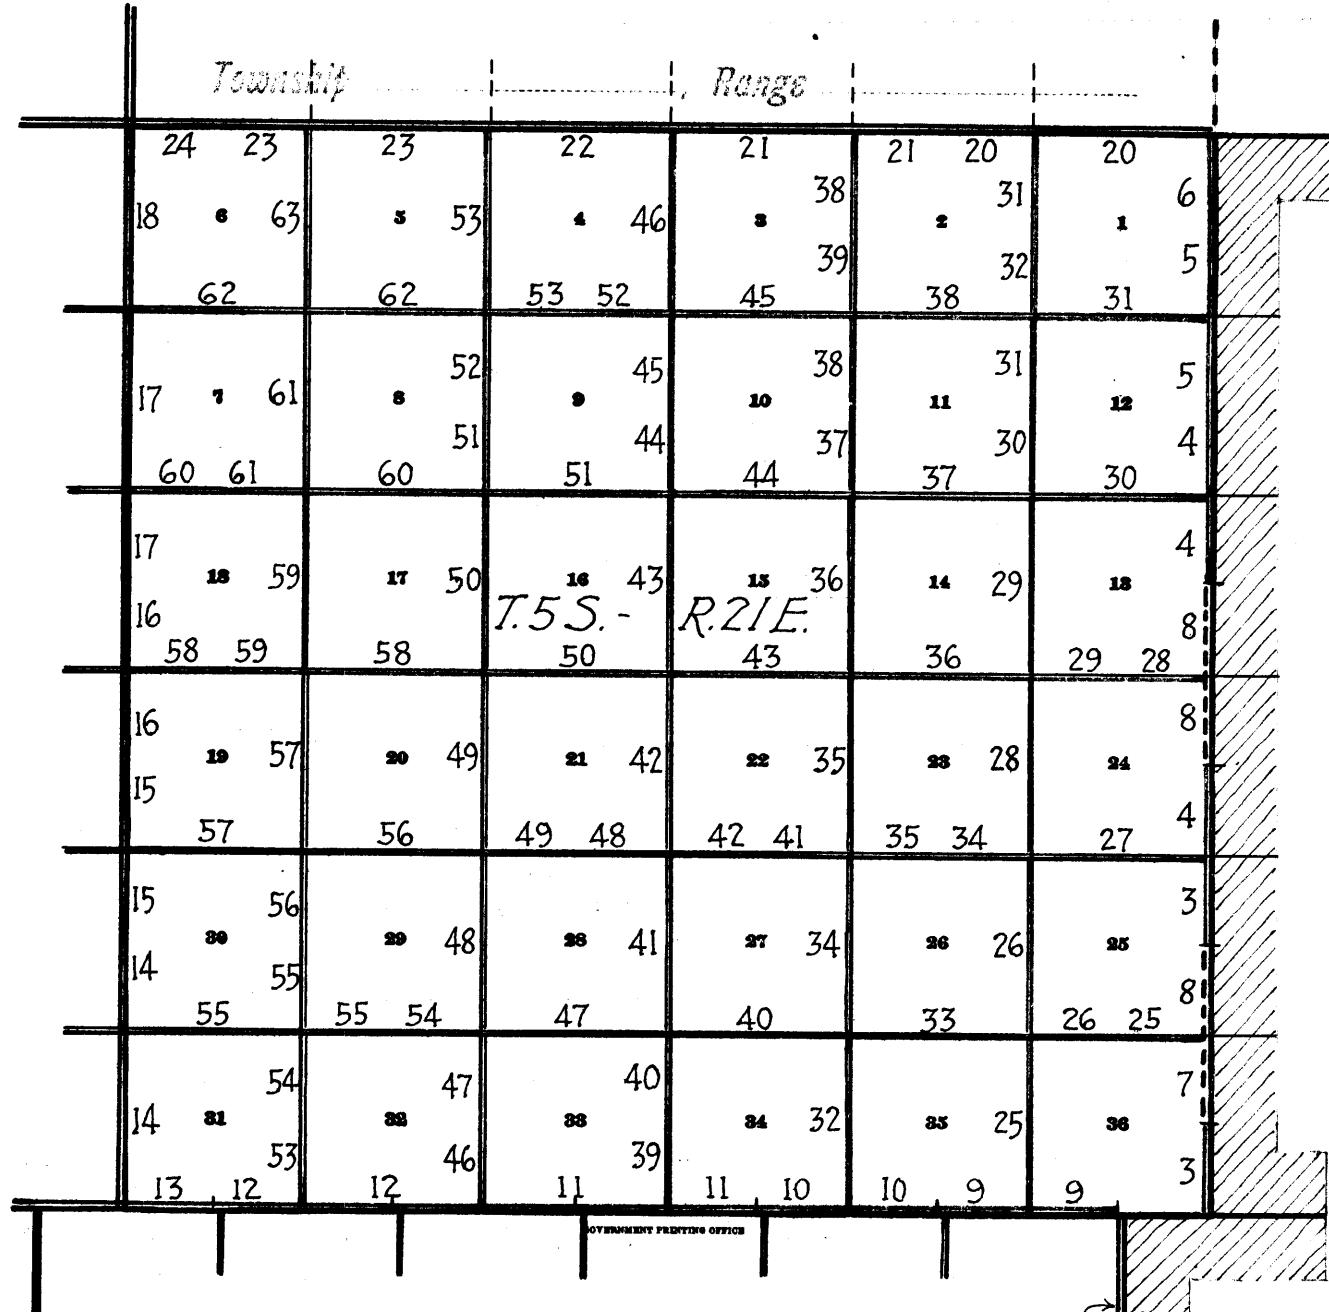

Retracement,

Resurvey and Survey completed April 18, 1928.

Retracement, resurveys and surveys herein described were executed on dates shown on diagram on page 1 hereof, by William E. Hiester, U.S. Surveyor, using Buff and Buff solar transit No. 19423, and Charles E. Hunter, U.S. Transitman, using Young and Sons light mountain transit No. 8584. Each instrument is equipped with full vertical circle and Smith solar attachment. The horizontal limbs are provided with two double verniers placed opposite to each other and reading to 30" of arc. The verniers of the vertical circles and of the solar attachments read to 1' of arc. Unless otherwise specified all azimuth determinations are accomplished with the solar attachments.

Preliminary Test of Instruments.

April 1, 1928, at camp near cor. of secs. 3, 4, 9 and 10, T. 6 S., R. 21 E., G. & S. R. B. & M., Arizona, latitude $32^{\circ}56'N.$, longitude $110^{\circ}11\frac{1}{2}'W.$, examine the adjustments of the instruments and correct all errors; then, to test the solar apparatus by comparing their indications from observations made during a.m. and p.m. hours with a meridian established by Polaris observation at this point yesterday as described in Book "A" of this group, proceed as follows:

At 8h. 0m., a.m. app. t., set off $32^{\circ}56'N.$ on the latitude arcs, $4^{\circ}38'N.$ on the declination arcs, and determine a meridian with each solar, both of which are found to agree with the true meridian.

At apparent noon, with the lat. arcs unchanged, observe the sun on the meridian, and obtain a reading on each decl. arc of $4^{\circ}41'N.$, which agrees with the computed declination of the sun.

At 4h. 0m., p.m., app. t., with the lat. arcs unchanged, set off $4^{\circ}45\frac{1}{2}'N.$ on the declination arcs, and determine a meridian with each solar, both of which agree with the true meridian.

As all of the solar observations taken during the usual hours of solar work come within 1' of the true meridian conclude that the adjustments of the instruments are satisfactory.

Unless otherwise specified all measurements are made with Lufkin steel tapes 5 chs. in length, compared with a Lufkin standard steel tape and found correct. The measurements are made on the slope, the vertical angles determined with clinometer and the slope measurements properly reduced to true horizontal distances for entry in the field notes.

Young and Sons, No. 8584.

April 18, 1928;

Examine the adjustments of the transits and find them
correct: then to test the solar apparatus, by comparing
their indications, resulting from observations made
during a.m. and p.m hours with a meridian established
by Polaris observation as follows:

April 19, 1928;

At camp near the $\frac{1}{4}$ sec. cor. of secs. 23 and 26 of T.
5 S., R. 21 E., G and SR Base Meridian Arizona, lat-
itude $32^{\circ}58'30''$, longitude, $110^{\circ}9'30''$ W., at 5h.49.3m a.m.
l.m.t., observe Polaris at eastern elongation,

Chains	<p>making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in line thus determined on a per driven firmly in the ground 5 chs.N.</p>
	<p>Azimuth of Polaris at eastern elongation is $1^{\circ}17'24''$</p>
	<p>at 7h 45m a.m. lay off the azimuth of Polaris $1^{\circ}17\frac{1}{2}'$ to the west, and mark the meridian thus determined by a tack driven firmly in a peg in the ground 5 ch. N.</p>
	<p>At 8h 0m a.m. app. t., set off $32^{\circ}58'$ N. on the lat. arcs $11^{\circ}15'N.$, on the decl. arcs; and determine a meridian with the solar, both of which agree with the true meridian.</p>
	<p>at apparent noon, with the lat. arcs unchanged, observe the sun on the meridian; the resulting reading of each decl. arc is $11^{\circ}18'$ N. which agrees with the computed decl. of the sun.</p>
	<p>at 4h. 0m.p.m. app. t., with the lat. arcs unchanged, set off $11^{\circ}22'$ N. on the decl. arcs, and determine a meridian with the solar, both of which agree with the true meridian.</p>
	<p>As all of the solar observations during the usual hours of solar work come within 1' of the true meridian, conclude that the adjustments of the instruments were maintained satisfactorily throughout the survey.</p>
-----	General Description.
-----	<p>The surface of the entire township is rolling, with the exception of the W. bdy. which is known as part of the Santa Teresa Mountains.</p>
-----	<p>The soil, over the mountains is rocky 4th rate, over the remainder of the township is sandy and gravelly 3rd rate.</p>
-----	<p>The timber consisting of cedar, pinon, juniper, and oak is scattering through a portion of the sections. Sycamore, ash and cottonwood is found along Goodwin wash.</p>
-----	<p>The undergrowth, consisting of mesquite, catclaw palo verde, manzanita and scrub oak is scattering in all sections.</p>
-----	<p>The only water supply within the township is Goodwin Creek, which is dry during the summer months. Enters the southwestern part of sec. 7 and drains southerly into sec. 28, thence where it takes a northeasterly course and leaves the township near the cor. of secs. 13, 18, 19 and 24 on E. bdy. of the township.</p>
-----	<p>Black Rock creek, enters the township near the standard cor. of secs. 33 and 34 on S. bdy of Tp. and traverses northeasterly thru secs. 34, 35, and 36 leaving the Tp. near the cor. of secs. 25, 30, 31 and 36 on E. bdy. of the township.</p>
-----	<p>There are no surface indications of valuable mineral deposits.</p>
-----	<p>There are several settlers within the township, a house and windmill lying in the NW $\frac{1}{4}$ of sec. 36 and fences inclosing a small tract, owned by the YL Cattle Co.</p>
