

Predictive Services

apps_Components_richtexteditor (no title)

Predictive Services units located in each geographic area and at the national level provide integrated analysis and assessment of weather, climate and fuel conditions. This information supports local, geographic and national decisions about pre-positioning personnel, equipment, and aircraft in specific locations when increased threats for fire starts are detected. BLM's Fire Planning and Fuels Management Division provides fire management leadership that proactively protects, enhances and/or sustains resources, communities, and environments.
