LOG EXPORT AND SUBSTITUTION RESTRICTIONS: All timber offered for sale hereunder is restricted from export from the United States in the form of unprocessed timber and is prohibited from being used as a substitute for exported private timber.

The average DBHOB for Douglas-fir is 10.8 inches; and the average gross merchantable log contains 33 bd. ft. None of the sale volume is salvage material. The following cruise methods were used for volume determination:

VARIABLE PLOT: Timber volumes in the thinning units were based on a variable plot cruise using form class tables for estimating board foot volumes of trees in 16-foot logs. Two hundred forty seven plots were measured using a twenty basal area factor. One hundred sixteen trees were randomly selected to be cruised.

3P: The Douglas-fir and red alder in the hardwood conversion units and the right-of-way have been cruised using the 3P system to select 131 sample trees. The sample trees have been cruised and their volumes computed using form class tables for estimating board foot volumes of trees in 16-foot logs. The volumes are then expanded to a total stratum volume.

100% CRUISE: The grand fir, western hemlock and bigleaf maple timber volumes in the hardwood conversion units and the right-of-way were based on a 100% cruise using form class tables for estimating board foot volume of trees in 16-foot logs.

CUTTING AREA: Nine units totaling approximately 455 acres partial cut, seven units totaling approximately 111 acres hardwood conversion, and 27 acres of right-of-way.
