CRUISE INFORMATION: With respect to merchantable trees of all species in all cruise strata: the average DBHOB is 10.2 inches: the average gross merchantable log contains 30 bd. ft.; the total gross volume is approximately 1,899 thousand bd. ft.; and 93 % recovery is expected. The average DBHOB for Douglas-fir is 9.9 inches; and the average gross merchantable log contains 28 bd. ft. None of the total sale volume is salvage material. The following cruise methods were used for volume determination:

VARIABLE PLOT: Timber volumes in Units 1-4 were based on a variable plot cruise. Using a 20 basal area factor (BAF), 269 plots were measured and 132 trees were randomly selected to be sampled. The sample trees have been cruised and their volumes computed using form class tables for estimating board foot volumes of

trees in 16-foot logs. The volumes are then expanded to a total sale volume.

3P: Trees within the road right-of-way and trees marked by the Bonneville Power Administration as hazard trees have been cruised using the 3P system to select 61 sample trees. The sample trees have been cruised and their volumes computed using form class tables for estimating board foot volumes of trees in 16-foot logs. The volumes are then expanded to a total sale volume.

CUTTING AREA: Four units totaling approximately 177 acres must be partial cut. One acre of right-of-way must be cut.
