

FORM 1

DOCUMENTATION OF BLM WILDERNESS INVENTORY FINDINGS ON RECORD

Year: 2010 Inventory Unit Number/Name: OR-015-019/Hayes Butte North

1. Is there existing BLM wilderness inventory information on all or part of this area?

No Yes (if more than one unit is within the area, list the names/numbers of those units.): NA

a) Inventory Source: Wilderness Proposed Initial Inventory: Roadless Areas and Islands Which Clearly Do Not Have Wilderness Characteristics, Oregon and Washington, April 1979, pg. 8; and Wilderness Review: Initial Inventory, Final Decisions on Public Lands Obviously Lacking Wilderness Characteristics and Announcement of Public Lands to be Intensively Inventoried for Wilderness Characteristics, Oregon and Washington, August 1979, pg. 16.

b) Inventory Unit Name(s)/Number(s): OR-015-019/Hayes Butte North

c) Map Name(s)/Number(s): U.S. Department of the Interior, Bureau of Land Management, Oregon: Final Decision, Initial Wilderness Inventory; Public Lands and Islands Which Do Not Have Wilderness Characteristics and Units to be Intensively Inventoried, August, 1979.

d) BLM District(s)/Field Office(s): Lakeview District, Lakeview Resource Area

2. BLM Inventory Findings on Record:

Existing inventory information regarding wilderness characteristics (if more than one BLM inventory unit is associated with the area, list each unit and answer each question individually for each inventory unit):

Ownership within Unit#/Name	Size (historic acres)	Natural Condition? Y/N	Outstanding Solitude? Y/N	Outstanding Primitive & Unconfined Recreation? Y/N	Supplemental Values? Y/N
BLM	5,700	NA	NA	NA	NA

FORM 2

**DOCUMENTATION OF CURRENT WILDERNESS INVENTORY
CONDITIONS**

a. Unit Number/Name: OR-015-019/Hayes Butte North

(1) Is the unit of sufficient size?

Yes X No _____

Boundary Determination: In 2006 thru 2010, the BLM conducted field inventory of the area to update its road and wilderness inventories. This field work included photo documentation of the boundary routes and some of the interior routes. Using BLM photos, field logs, and staff field knowledge, a BLM inter-disciplinary (ID) team completed an analysis of the motorized routes within the Hayes Butte Area in September of 2010. Based on the results of the route analysis, the BLM ID team identified a total of five inventory units within the general area (Map 2A). The results of the route analysis are documented in the road analysis forms contained in the wilderness evaluation file.

The ID team found that the unit is currently bounded by a combination of roads and private lands. In the south it is bounded by private land and Horning Gap Road (BLM 7117-00). In the west it is bounded by County Road 5-13 (Pitcher Lane). In the north it is bounded by an unnumbered road, private land, and Connley Lane (County Road 5-10c) (Map 2A). Refer to the road analysis forms, photos, photo logs, and BLM ID team minutes in the wilderness inventory file for additional supporting information regarding these boundary determinations. These current unit boundaries encompass approximately 6,306 acres of BLM-administered lands, and the majority of Connley Hills ACEC (3,496 out of 3,600 acres).

Additional background on the process that the BLM ID team followed during this evaluation is contained in the document, *Wilderness Inventory Maintenance Process for the Lakeview Resource Area, BLM*, and the ID team meeting notes contained in the wilderness inventory file.

DESCRIPTION OF CURRENT CONDITIONS:

The unit is located about 8 miles north of Silver Lake, Oregon (Map 1). The unit contains Connley Hills which rise approximately 800 feet above the surrounding flats. The vegetation is primarily sagebrush and scattered juniper.

(2) Is the unit in a natural condition?

Yes _____ No X N/A _____

Previous Inventory Unit Description: After reviewing comment and available information on the unit, it remained clear and obvious that the unit did not contain wilderness characteristics. Two roads divided the unit into parcels less than 5,000 acres. They were not of sufficient size to make practical their use and preservation as wilderness. Because of the relatively small size and lack of topographic and vegetative screening, the unit did not provide an outstanding opportunity for solitude. It also did not provide an outstanding opportunity for solitude. (Refer to: *Initial Inventory*. August, 1979. Pg 16)

Historic inventory unit 1-19 failed to meet the minimum size criteria in the 1979 *Initial Inventory* and at that time was dropped from further wilderness evaluation. The August, 1979 decision to drop the unit from further wilderness consideration was based primarily on the presence of two roads that divided the unit into three smaller units, each considerably less than 5,000 acres. After completion of the road evaluation in September, 2010, the BLM found that the roads that previously eliminated this unit from further wilderness consideration do not presently meet the criteria for being considered a boundary road. The Hayes Butte North Unit is currently estimated at 6,300 acres.

Current Inventory Unit Description: In the 2003 *Lakeview Resource Management Plan and Record of Decision* (RMP), approximately 3,496 acres of the inventory unit was officially designated The Connley Hills Area of Critical Environmental Concern (ACEC)/Research Natural Area (RNA). There were two driving reasons why the Connley Hills ACEC/RNA was designated for special management. The first was to preserve significant cultural sites that contain materials and information from Great Basin inhabitants dating back 11,000 years. The second reason was that the Connley Hills was found to have four distinct vegetation communities, three of which are found nowhere else in Oregon. This area serves as an important reference point for comparative rangeland health studies and research projects. (Refer to: *Lakeview Proposed Resource Management Plan and Final Environmental Impact Statement* 2003. Pg. A-197).

There is currently one constructed well and approximately 5.1 miles of pasture division fence within the unit. There are approximately 8.9 miles of primitive motorized routes, 0.8 miles of motorized trails, 2.5 miles of reclaiming routes, and 4.7 miles of routes designated for closure in the Lakeview RMP/ROD within the unit. There is one mineral pit (17 acres) just outside of the western boundary which has recently been approved for eastward expansion into the unit. There is one private inholding located in the center of the unit totaling approximately 77 acres.

After the adoption of the ACEC/RNA, 4.7 miles of unit roads were designated for closure, and another 2.5 miles were found to be reclaiming. However, these closures have not been implemented on the ground and thus, continue to impact the natural character of the area.

Most of the above human disturbances are distributed evenly across the unit and cannot be excluded from the unit boundary. Despite the presence of small unique vegetation communities within the ACEC/RNA there are few places within the unit where the imprints of man are unnoticeable and in a natural state free of motorized routes. For these reasons the ID team determined that overall, the unit currently is not in a natural condition as the imprints of man are substantially noticeable across most of the unit.

(3) Does the unit have outstanding opportunities for solitude?

Yes _____ No _____ N/A X _____

Previous Inventory Unit Description: The topography, size, and lack of screening were found to preclude any outstanding opportunity for solitude. The unit is surrounded by private lands, with extensive agriculture and occupation observable from within the unit. (Refer to: *Initial Inventory*, April, 1979. Pg8)

Current Inventory Unit Description: Current solitude opportunities were not evaluated because the unit failed to meet the naturalness criteria.

(4) Does the unit have outstanding opportunities for primitive and unconfined recreation?

Yes _____ No _____ N/A X _____

Previous Inventory Unit Description: The unit did not provide an outstanding opportunity for recreation. (Refer to: *Final Decision on Lands Obviously Lacking Wilderness Characteristics*, August, 1979. Pg16)

Current Inventory Unit Description: Current primitive and unconfined recreation opportunities were not evaluated because the unit failed to meet the naturalness criteria.

(5) Does the unit have supplemental values?

Yes _____ No _____ N/A X _____

Previous Inventory Unit Description: Supplemental values were not evaluated in the previous inventory due to the unit not meeting wilderness criteria.

Current Inventory Unit Description: Supplemental values were not evaluated because the unit failed to meet the naturalness criteria.

Summary of Findings and Conclusion

Unit Name and Number: OR-015-019/Hayes Butte North

Results of Analysis:

1. Does the area meet the size requirements? X Yes ___ No
2. Does the area appear to be natural? ___ Yes X No ___ NA
3. Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? ___ Yes ___ No X NA
4. Does the area have supplemental values? ___ Yes ___ No X NA

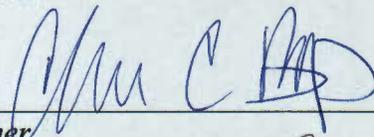

Conclusion (*Check One*):

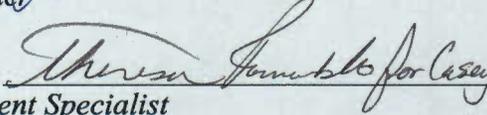

___ The area-or a portion of the area-has wilderness character.

 X The area does not have wilderness character.

FORM 2

**DOCUMENTATION OF CURRENT WILDERNESS INVENTORY
CONDITIONS**

a. Unit Number/Name: OR-015-020/Hayes Butte South

(1) Is the unit of sufficient size?

Yes X No

Boundary Determination: In 2006 thru 2010, the BLM conducted field inventory of the area to update its road and wilderness inventories. This field work included photo documentation of the boundary routes and some of the interior routes. Using BLM photos, field logs, and staff field knowledge, a BLM inter-disciplinary (ID) team completed an analysis of the motorized routes within the Hayes Butte Area in September of 2010. Based on the results of the route analysis, the BLM ID team identified a total of five inventory units within the area. The other four units were evaluated separately (see Map 2C). The results of the route analysis are documented in the road analysis forms contained in the wilderness evaluation file.

The ID team found that the Hayes Butte South unit is currently bounded by a combination of roads, right-of-ways, and private lands. In the north, it is bounded by Horning Gap Road (BLM 7117-00), and private land. It is bounded by private land to the west, an unnumbered road in the south, and a 500KV power line right of way in the east (Map 2B). Refer to the road analysis forms, photos, photo logs, and BLM ID team minutes in the wilderness inventory file for additional supporting information regarding these boundary determinations. These current unit boundaries encompass approximately 6,795 acres of BLM-administered lands, and a small area of the Connley Hills ACEC/RNA (104 out of 3,600 acres) lies within the unit.

Additional background on the process that the BLM ID team followed during this evaluation is contained in the document, *Wilderness Inventory Maintenance Process for the Lakeview Resource Area, BLM*, and the ID team meeting notes contained in the wilderness inventory file.

DESCRIPTION OF CURRENT CONDITIONS: The unit is located about 5 miles northeast of Silver Lake, Oregon (Map 1). Hayes Butte in the north of the unit has fairly rugged topography with juniper stands. The remainder of the unit is sloping terrain with little relief dropping to the surrounding flats.

(2) Is the unit in a natural condition?

Yes No X N/A

Previous Inventory Unit Description: Approximately 1,000 acres in the north did not appear heavily impacted by man's works; the remainder of the unit is dominated by views of activities on private lands and a 500KV power line (which forms the eastern boundary). (Refer to: Initial Inventory. April, 1979. Pg8)

Historic inventory unit 1-20 failed to meet the naturalness criteria in the 1979 *Initial Inventory* and at that time was dropped from further wilderness evaluation. The August, 1979 decision to drop the unit from further wilderness consideration was based primarily on the determination that the unit is not generally free of the works of man. The presence of numerous ways, roads, seedings, and a 500kv power line, were cited as the main disturbances within the unit.

Current Inventory Unit Description: In the 2003 Lakeview Resource Management Plan and Record of Decision (RMP), approximately 104 acres of the inventory unit was officially designated The Connley Hills Area of Critical Environmental Concern (ACEC)/Research Natural Area (RNA) (Map 2B). This area is located in the northwestern part of the unit. There were two driving reasons why the Connley Hills ACEC/RNA was a proposed area for special management. The first was to preserve significant cultural sites that contain materials and information from Great Basin inhabitants dating back 11,000 years. The second reason was that the Connley Hills was found to have four distinct vegetation communities, three of which are found nowhere else in Oregon. This area serves as an important reference point for comparative rangeland health studies and research projects. (Refer to: Lakeview Proposed Resource Management Plan and Final Environmental Impact Statement. 2003. Pg. A-197).

This unit has been heavily developed with water infrastructure for livestock. There are currently five water troughs, one storage tank, one wildlife guzzler, and one reservoir. Pipeline development exists throughout the unit (2.4 miles), and can easily be seen by the casual observer. At present, there is 14.2 miles of pasture division fence within the unit, in addition to substantial segments of old fences that are now abandoned. There are approximately 14.5 miles of primitive motorized routes.

This unit is surrounded on three sides by land that is primarily utilized for agriculture. Machinery noise from crop maintenance and vehicle noise from the high density and close proximity of area roads and routes are easily observable from within the unit. Since the the unit is dominated by Hayes Butte and gradual slopes, there are few places within the unit where the imprints of man are unobservable and in a predominately natural state.

In the north part of the unit, where Hayes Butte rises sharply up from the gradual slopes, there is an area of between 1,000 and 2,500 acres that remains in a somewhat natural condition. This area, however, is impacted by audio and visual man made disturbances. Most notably, the 500KV power line, which can be observed from a most of the east side of the unit (as far away as three miles), and heard from up to one-quarter of a mile under calm conditions. The man-made disturbances in this unit are substantially noticeable. For these reasons the ID team determined that overall, the unit currently is not in a natural condition as the imprints of man are substantially noticeable across most of the unit.

(3) Does the unit have outstanding opportunities for solitude?

Yes _____ No _____ N/A X

Previous Inventory Unit Description: Because of the absence of topographic and vegetative screening in the majority of the area, the unit did not offer an outstanding opportunity for solitude. (Refer to: Final Decision on Lands Obviously Lacking Wilderness Characteristics. August, 1979. Pg17)

Current Inventory Unit Description: Current solitude opportunities were not evaluated because the unit failed to meet the naturalness criteria.

(4) Does the unit have outstanding opportunities for primitive and unconfined recreation?

Yes _____ No _____ N/A X

Previous Inventory Unit Description: There was not outstanding opportunity for a primitive and unconfined type of recreation. (Refer to: Final Decision on Lands Obviously Lacking Wilderness Characteristics. August, 1979. Pg17)

Current Inventory Unit Description: Current primitive and unconfined recreation opportunities were not evaluated because the unit failed to meet the naturalness criteria.

(5) Does the unit have supplemental values?

Yes _____ No _____ N/A X

Previous Inventory Unit Description: Supplemental values were not evaluated in the previous inventory due to the unit not meeting wilderness criteria.

Current Inventory Unit Description: Supplemental values were not evaluated because the unit failed to meet the naturalness criteria.

Summary of Findings and Conclusion

Unit Name and Number: OR-015-020/Hayes Butte South

Results of Analysis:

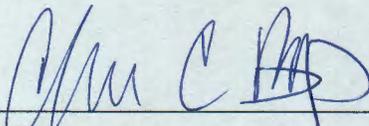

1. Does the area meet the size requirements? Yes No
2. Does the area appear to be natural? Yes No NA
3. Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? Yes No NA
4. Does the area have supplemental values? Yes No NA

Conclusion (*Check One*):

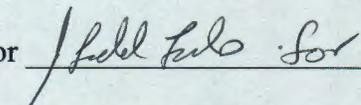

The area-or a portion of the area-has wilderness character.

The area does not have wilderness character.

Ownership within Unit#/Name	Size (historic acres)	Natural Condition? Y/N	Outstanding Solitude? Y/N	Outstanding Primitive & Unconfined Recreation? Y/N	Supplemental Values? Y/N
BLM	9,600	No	NA	NA	NA

FORM 2

**DOCUMENTATION OF CURRENT WILDERNESS INVENTORY
CONDITIONS**

a. Unit Number/Name: Hayes Butte Area/Unnumbered Units

(1) Is the unit of sufficient size?

Yes _____ No __X__

Boundary Determination: In 2006 thru 2010, the BLM conducted field inventory of the area to update its road and wilderness inventories. This field work included photo documentation of the boundary routes and some of the interior routes. Using BLM photos, field logs, and staff field knowledge, a BLM inter-disciplinary (ID) team completed an analysis of the motorized routes within the Hayes Butte Area in September of 2010. Based on the results of the route analysis, the BLM ID team identified a total of five inventory units within the area (Map 2C). Two of the five units are larger than 5,000 and have been evaluated separately, while the remaining three are considerably less than 5,000 acres. The results of the route analysis are documented in the road analysis forms contained in the wilderness evaluation file.

Of these three units, one is located in the northwest corner while the other two are located in the southern portion of the Hayes Butte Area. They are bounded by a combination of roads and private lands. The north unit is bounded by private land, an unnumbered road, County Road 5-13 (Connley Lane), and County Road 5-10c (Pitcher Lane). The southern units are bounded by private land to the west, and a 500KV power line right-of-way to the east (Map 2C). Refer to the road analysis forms, photos, photo logs, and BLM ID team minutes in the wilderness inventory file for additional supporting information regarding these boundary determinations. The boundaries for these three small units encompass a total of approximately 3,350 acres of BLM-administered land. These three units fail to meet the size criteria or any of the exceptions to the size criteria.

Additional background on the process that the BLM ID team followed during this evaluation is contained in the document, *Wilderness Inventory Maintenance Process for the Lakeview Resource Area, BLM*, and the ID team meeting notes contained in the wilderness inventory file.

DESCRIPTION OF CURRENT CONDITIONS:

Three small units located about 5 miles northeast of Silver Lake, Oregon (Map 1). Hayes Butte in the north of the unit has fairly rugged topography with juniper stands. The remainder of the unit is sloping terrain with little relief dropping to the surrounding flats.

(2) Is the unit in a natural condition?

Yes _____ No _____ N/A X _____

Previous Inventory Unit Description: The units were dominated by activities on private lands and a 500KV power line which forms the eastern boundary. (Refer to: Initial Inventory. April, 1979. Pg8)

Historically, inventory unit 1-20 encompassed the two southern units; however, it failed to meet the naturalness criteria in the 1979 Final Decision on Lands Obviously Lacking Wilderness Characteristics and at that time was dropped from further wilderness evaluation. The August, 1979 decision to drop the unit from further wilderness consideration was based primarily on the determination that the unit is not generally free of the works of man. The presence of numerous ways, roads, seedings, and a 500kv power line, were cited as the main disturbances within the unit.

Current Inventory Unit Description: Natural character was not evaluated because the units failed to meet the size criteria.

(3) Does the unit have outstanding opportunities for solitude?

Yes _____ No _____ N/A X _____

Previous Inventory Unit Description: Because of the absence of topographic and vegetative screening in the majority of the area, the units do not offer an outstanding opportunity for solitude. (Refer to: Final Decision on Lands Obviously Lacking Wilderness Characteristics. August, 1979. Pg17)

Current Inventory Unit Description: Current outstanding opportunity for solitude was not evaluated because the units failed to meet the size criteria.

(4) Does the unit have outstanding opportunities for primitive and unconfined recreation?

Yes _____ No _____ N/A X _____

Previous Inventory Unit Description: There were no outstanding opportunities for a primitive and unconfined type of recreation. (Refer to: Final Decision on Lands Obviously Lacking Wilderness Characteristics. August, 1979. Pg17)

Current Inventory Unit Description: Primitive and unconfined recreation opportunities were not evaluated because the units failed to meet size criteria.

(5) Does the unit have supplemental values?

Yes _____ No _____ N/A X

Previous Inventory Unit Description: Supplemental values were not evaluated in the previous inventory due to the units not meeting wilderness criteria.

Current Inventory Unit Description: Current supplemental values were not evaluated because the units failed to meet the size criteria.

Summary of Findings and Conclusion

Unit Name and Number:

Results of Analysis:

1. Does the area meet the size requirements? ___ Yes X No
2. Does the area appear to be natural? ___ Yes ___ No X NA
3. Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? ___ Yes ___ No X NA
