

Natural openings (gaps) on 13-1 with pine and white oak and native grasses. In foreground small grand fir.

Large ponderosa, grasses.

This is a typical view of this stand. Large DBA trees but thin enough canopy to allow growth, notice young well spaced trees and not a dense and explosive undergrowth.

This slope includes, large pines, huge firs, cedars, a large sugar pine that has produced saplings. Hardwoods include Madrone, canyon live oak, white oaks, big leaf maples.

This stand has the makings of a fire resistant stand.
