Public Lands USA: Use, Share, Appreciate

Medford District

BLM

Medford's Messenger

Publication of

**Bureau of Land Management
Medford District Office**

Winter 2007

Dear Public Land User:

The primary purpose of *Medford's Messenger* is to keep you informed of ongoing and proposed activities on the Medford District. It contains listings of projects, by resource area, that have been completed recently and identifies newly proposed projects. It is our desire to keep you informed about issues, activities, and opportunities we think are important to our publics. More importantly, we are seeking ideas and comments from those who may be affected by our multiple-use management programs.

This planning update has been organized to give you a brief description of activities occurring in several programs, as well as descriptions of new projects being considered by the district. Additional information can be obtained from the people listed in the descriptions. These contact people are familiar with their projects and are able to answer questions and provide more details on the projects. They are interested in information you wish to share concerning any of the projects or project areas.

Western Oregon Plan Revision

As we develop the initial stages of the land use plan revisions, we will keep you informed of our progress and we will strive to find timely and meaningful opportunities for sharing perspectives, as well as planning concepts. Alternatives have been developed and are being evaluated in the fall of 2006 and into 2007. We hope to have a draft Environmental Impact Statement completed by June of 2007.

When the draft resource management plan and environmental impact statement is released for the 90-day public review and comment period in 2007, there will be numerous opportunities for public input. After public comments have been considered, a proposed resource management plan and final environmental impact statement will be issued in the fall of 2007. A record of decision for each district will be issued in the Spring of 2008.

We appreciate your interest in our land use planning process and encourage you to monitor your BLM internet site for status reports and notices of any scheduled public meetings, tours, and advisory council meetings. The latest information on the Western Oregon Plan revision process can be found on the following website: www.blm.gov/or/plans/

Medford District Website

The information contained in *Medford's Messenger* is available on the Medford District website at www.blm.gov/or/districts/medford. The website has been redesigned to reflect current design standards, customer needs and management controls. This redesigned site should result in more timely and relevant information being distributed in a cost-effective and efficient manner.

To keep printing costs down, please contact us if you no longer want to receive the Messenger and we will remove your name from the mailing list.

Our practice is to make comments on projects available for public review, including names and home addresses of respondents. Unless you specifically request us to withhold your name and address, it will be made available to the public on request.

We would appreciate any comments or suggestions you may have regarding this Planning Update including how it could be improved to make it more useful to you.

Thank you for your continued interest in BLM's management of your Public Lands. If you have any questions on information in this Planning Update, stop by the office or call us at 541-618-2200.

Sincerely,

Timothy B. Reuwsaat
District Manager

National Environmental Policy Act Analysis and Documentation

The review of the environmental effects of a proposed management action can occur in any of four ways: categorical exclusions, administrative determinations, environmental assessments, or environmental impact statements.

1. A *categorical exclusion* is used when it has been determined that some types of proposed activities do not individually or cumulatively have significant environmental effects and may be exempt from requirements to prepare an environmental analysis. Departmental policy and the Council of Environmental Quality regulations require that categorical actions be subjected to sufficient environmental review to determine whether any of the extraordinary circumstances apply. In addition, no public notice of a federal agency's use of a categorical exclusion is required.

The Medford District throughout the year will have numerous actions that fall under this category. They will not be advertised in this quarterly report because in most instances are small in nature and are completed in a short time. Examples of actions that qualify for this exclusion are, rights-of-ways over existing roads, removing a small amount of hazard trees, approval of grazing transfers, routine maintenance, etc.

If you are interested in any of these types of actions contact the Medford District office and we can give you information on current projects.

2. An *administrative determination* is a determination by BLM that NEPA documentation previously prepared by the BLM fully covers a proposed action and no additional analysis is need. This procedure is often used in conjunction with a plan conformance determination. If an action is fully in conformance with actions specifically described in the RMP and analyzed in the RMP/FEIS, a plan conformance determination many be made and no additional analysis would be needed. A recent procedure now being implemented by the BLM is called a determination of NEPA adequacy (DNA) in which an action is examined in the light of existing NEPA documents to determine if NEPA requirements have been met.
3. An *environmental assessment* (EA) is prepared to assess the effects of actions that are not exempt from NEPA, area not categorically excluded, and are not covered by an existing environmental document. An EA is prepared to determine if a proposed action or alternative will significantly affect the quality of the human environment.
4. Major proposals the will significantly affect the environment and that have not been previously analyzed through and *environmental impact statement* (EIS) require that an EIS be prepared.

Abbreviations and Definitions

ACEC/RNA—Area of Critical Environmental Concern/Research Natural Area

BO—Biological Opinion

CE—Categorical Exclusion—Actions which do not have significant effects on the environment and for which an Environmental Assessment (EA) or an Environmental Impact Statement (EIS) is not required.

EA – Environmental Assessment – A concise public document that briefly provides evidence and analysis of a proposed Federal action. It is used to determine whether further analysis needs to be done for an Environmental Impact Statement (EIS) or a Finding of No Significant Impact (FONSI).

GFMA—General Forest Management Area

IDT—Interdisciplinary Team—A group of resource specialists, whose participation is determined by the issues relating to the project proposal, and who conduct environmental analysis.

LSR—Late-Successional Reserves—One of the seven Federal land designations set forth in the *Northwest Forest Plan*. These reserves will maintain a functional, interactive, late-successional and old-growth forest ecosystem.

Matrix Lands—One of the seven Federal land designations set forth in the *Northwest Forest Plan*. Most timber harvest contributing to the Allowable Sale Quantity takes place in this area.

MBF—thousand board feet.

MMBF—million board feet

NEPA—National Environmental Policy Act—A federal law which sets the systematic interdisciplinary analysis to achieve integrated consideration of physical, biological economic, and other sciences to provide for an informed decision. The process provides for public participation in the development, review, and revision of certain activities on Federal Lands.

RMP—Resource Management Plan—A land use plan prepared by the BLM in accordance with the Federal Land Policy and Management Act (FLPMA).

Scoping—An early and open part of environmental analysis that allows interested public and other Federal, state and local agencies the opportunity to provide issues, concerns and opportunities relative to proposed project actions. Scoping is required by regulation for Environmental Impact Statements.
