SUBJECT: Mtn of the Rogue Trail

SUMMARY: Vince called to find out more about the bike trail proposal. I had emailed Mark Vargas at ODFW last week to make sure they knew about the proposal, and to find out if there were any wildlife concerns.

Vince stated that the area is used by deer and elk, and that the project area is in deer winter range, but that there are not a lot of migratory deer using the area. He didn't see any serious conflicts with the trail and trail use.

He said hunters probably use the area, and that the presence of the trail system could result in easier access for hunters.

Vince also asked what the soils were like, and if the trails could be muddy in the winter. I told him our soils specialist didn't see any major issues as of yet, and there aren't any granitics in that area, so we don't anticipate erosion being a problem.
