

Upper Umpqua Watershed Plan

Rader–Hubbard Stream Crossing Upgrade Project

Decision Record

An Interdisciplinary (ID) Team of the Swiftwater Field Office, Roseburg District, Bureau of Land Management has analyzed the **Upper Umpqua Watershed Plan**. This analysis was documented in Environmental Assessment (EA) No. OR-104-02-09. The EA analyzed the replacement of stream crossing culverts on 26 sites within the Upper Umpqua fifth-field watershed. This action will occur at three of those sites in Section 14, (Rader Creek); and Sections 19, and 20 (Hubbard Creek); T24S R8W; W.M.

This proposal is in conformance with the *Final - Roseburg District Proposed Resource Management Plan / Environmental Impact Statement (PRMP/EIS)* dated October 1994 and its associated *Roseburg District Record of Decision and Resources Management Plan (RMP)* dated June 2, 1995.

Decision :

It is my decision to authorize the implementation of that portion of the Proposed Action as outlined above and described in Section II, paragraph B1b (pg. 7) of the EA. The EA did not identify any impacts of the Proposed Action that would be beyond those identified in the EIS. These projects will be accomplished through contracts offered for bid and accomplished during the summer construction season of 2004.

Finding of No Significant Impacts :

Based on the analysis of potential impacts contained in the environmental assessment, I have determined that impacts are not expected to be significant and an environmental impact statement is not required.

Rationale for Decision

The Proposed Action Alternative meets the objectives for lands in the Matrix and Riparian Reserve Land Use Allocations and follows the principles set forth in the *"Roseburg District Record of Decision and Resources Management Plan"* (RMP), the *"Final Supplemental Environmental Impact Statement (FSEIS) on Management of Habitat for Late-Successional and Old Growth Forest Related Species Within the Range of the Northern Spotted Owl"* (Feb. 1994) and the Record of Decision (ROD) for that plan dated April 13, 1994.

Section II of the EA describes three alternatives: a "No Action" alternative and two "Proposed Action" alternatives. The No Action alternative was not selected because the EA did not identify any impacts of the Proposed Action that would be beyond those identified in the EIS. The No Action alternative would not meet the objective of reducing potential sedimentation, improving fish passage and opening additional stream habitat to Pacific salmonids. This decision is common to both of the action alternatives.

National Historic Preservation Act (Section 106) responsibilities under the 1997 National Programmatic Agreement and the 1998 Oregon Protocol have been completed. No consultation was required.

Consultation with US Fish and Wildlife Service (FWS) for this project is covered under the *Formal Consultation and Written Concurrence on FY 2003-2008 Management Activities (Ref. # 1-15-03-F-160)* (Feb. 21, 2003) which concluded that the project would “. . . not likely to jeopardize the continued existence of the spotted owl, murrelet and bald eagle, and are not likely to adversely modify spotted owl or murrelet critical habitat . . .”. Consultation with the National Oceanic and Atmospheric Fisheries is covered under the *Programmatic Biological and Conference Opinion* (Oct. 18, 2002). The Biological Opinion concluded that the project “. . . is not likely to jeopardize the continued existence of . . . OC coho salmon, or OC steelhead”.

This decision is based on the fact that both Proposed Action Alternatives implements the Management Actions/Direction as stated in the RMP. The project design features as stated in the EA would protect the existing transportation network by reducing the risk of culvert failure (RMP, pg. 137), reduce barrier to movement and dispersal of anadromous and resident fish (RMP pg. 40), and reduce the risk of sediment input from culvert failure into the stream system (RMP pg. 19). This decision recognizes that impacts will occur to these resources, however, the impacts to resource values would not exceed those identified in the Environmental Impact Statement (PRMP/EIS).

Comments were solicited from affected tribal governments, adjacent landowners and affected State and local government agencies as well as the general public. No comments were received from any of these sources.

Compliance and Monitoring

Monitoring will be conducted as per the guidance given in the ROD and the RMP.

Protest and Appeal Procedures

Protests shall be filed with the authorized officer (Jay K. Carlson) and shall contain a written statement of reasons for protesting the decision. Protests received more than 15 days after the publication of the Notice of Decision are not timely filed and shall not be considered. Upon timely filing of a protest, the authorized officer shall reconsider the decision to be implemented in light of the statement of reasons for the protest and other pertinent information available to him. The authorized officer shall, at the conclusion of his review, serve his decision in writing to the protesting party. Upon denial of a protest the authorized officer may proceed with the implementation of the decision.
