*The analysis portion of this project was conducted from summer 1997 through spring 1998. A first iteration of this document was completed in September 1998. The analysis generally follows the federal guide for watershed analysis (Version. 2.2, August 95) although some modifications were made, such as combining chapters to reduce redundancies. This is a document which is still evolving and will be updated as new information becomes available. The data in this document were the best available, although in some cases there were little relevant data available. Management opportunities for this analysis area must be considered in light of the checkerboard land ownership pattern of BLM-administered land; cooperative programs with adjacent ownerships are necessary to achieve optimum results in restoration opportunities. No warranty is made as to the accuracy, reliability or completeness of the data or maps contained herein.*
