**As the Nation's principal conservation agency, the Department of Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering economic use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interest of all people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. administration.**

~ Notice ~

On March 31, 2011, the United States District Court for the District of Columbia vacated and remanded the administrative withdrawal of the Salem District's 2008 Record of Decision and Resource Management Plan (Douglas Timber Operators et al. v. Salazar).

The Salem District will design new projects to conform to the management objectives, land use allocations, and management direction set out in the 2008 ROD and RMP. However, due to continuing uncertainty regarding planning in western Oregon, we will design projects so that they are not inconsistent with the Salem District's 1995 RMP. As a result, some new projects may include some design features not mentioned specifically in the 2008 ROD and RMP. Nonetheless, these projects will be consistent with the goals and objectives in the 2008 ROD and RMP.

---

**Current projects are described in Tables 1 – 4.  
Fiscal Year 2011 timber sales are described in Table 5.**

Explanatory comments concerning Tables 1–4:

Projects are organized by project type, project name/description, location, planning status, and contact person. A project may include the following stages:

Developing Proposed Action – A site-specific proposal, called a proposed action, is developed to move the existing condition of an area towards a desired condition or result.

Scoping – Public comment is sought on the proposed action. Comments are used to refine the proposal, or to identify issues which will define the scope of analysis and alternatives to be considered.

Developing Alternatives – A range of alternatives is developed based on the issues raised during scoping, while addressing the purpose and need for the project.

Analyzing Effects – The effects of implementing the alternative(s) are determined and documented in an EIS (Environmental Impact Statement), EA (Environmental Assessment), CX (Categorical Exclusion), or DNA (Determination of NEPA Adequacy).

Comment Period – Comments are generally sought for 60 days on a draft EIS, and for 30 days on an EA, and FONSI (Finding of No Significant Impact). There are no established comment periods for a CX or DNA. Comment periods are established commensurate with the anticipated level of public interest.

Notice of Decisions – Notice of decisions from an EIS and EA will be published in a newspaper in the area where the lands affected by the decision are located. They will be sent to those who have requested such notices. Notices of decision from an EIS will also be published in the Federal Register. Notice for projects which qualify as a CX or DNA will be available for public review at the appropriate field office.
