Subject: Continuing Education in Fuels Management Course Information

This is an announcement for the Continuing Education in Fuels Management (CEFM) course to be held in Redmond, Oregon, April 24-May 5, 2006. Continuing Education in Fuels Management is designed to teach fuels and vegetation managers to inventory, analyze and prepare project plans to reduce hazardous fuels. The course is specifically designed for fuels and vegetation managers to work together, and although not a requirement, please consider sending a team consisting of a fuels manager and a vegetation manager to the course.

The attached course description describes the application process. A maximum of 24 students will be selected from Forest Service and Bureau of Land Management Oregon and Washington applicants. The State Office/Regional Office has set aside funds to pay for at least half of the \$1850 tuition cost, depending on the number of students attending.

This course has been approved for credit for GS-401 Fire Management requirements, and meets the requirements for Category I Silvicultural recertification.

This is an excellent opportunity to increase our planning skills for one of our highest priority program areas.
