**Subject:** Data from 2003 Aquatic and Riparian Effectiveness Monitoring Program

The attached report and CD provide data and information collected on your Forest Service Forest or Bureau of Land Management District under the interagency Aquatic and Riparian Effectiveness Monitoring Program (AREMP) for the Northwest Forest Plan. Included are an overview of the monitoring plan and brief descriptions of the data collection and analysis procedures. Actual data summaries, photographs, and maps for your Forest/District are included on the enclosed CD.

This information will eventually be available on a website. In the meantime, we will periodically be providing you this information for local applications. In particular, we believe the in-channel, riparian, and upslope attribute data will be useful to your Forest/District fish and wildlife biologists and hydrologists for watershed analyses, updating fish and amphibian distribution maps, and other Forest/District monitoring efforts. Watershed condition results for the watershed(s) we sampled on your unit will be sent to you later this summer.

We appreciate the continued support by your personnel and look forward to strengthening working relationships between the Regional and State Offices and field units.

Please contact Steve Lanigan, AREMP team leader, at (503) 808-2261 if you would like to receive any additional information about AREMP. Thanks again for your continuing support.
