Dear BLM Planning Team:

To BLM Planning,

The chemicals Glyphosate and Attrazine are seeping into the ground water and making its way to the rivers, killing the fish habitats and all the water mutations depending on them.

Realizing the private interest groups and stake holders have families with jobs to do, we are hoping to come to a compromise. Working with the local and foreign corporations to secure and improve the quality of life for our community and children.

We respectfully ask that the timber companies create a buffer area around the spring sites where the water reaches the surface and feeds our rivers.

Also, hopefully taking a different approach and finding other methods of practice other than using chemical poisons and clear cutting techniques.

Thank You For Your Consideration. Robby
