I am opposed to the Western Oregon Plan Revisions. Global warming means greater care should be taken of the environment. It is short sighted to only think of money when considering our public lands. Create jobs by carefully cutting brush, reforestation and repair of stream habitat. The recent land slides in Washington and Oregon show that science is not being used to decide what to cut, and clear cutting is never a good idea. Using information from the 1930s is ridicules.

Counties should be compensated for having federal land within their boundaries but compensation should not be tied to the amount of money taken from the land. Every citizen in our country is responsible for preserving our public lands for future generations.

Thank you.
