Bureau of Land Management
Portland
Oregon

Dear All.

We very much hope that you will reject the proposals to increase timber cutting in Lane County and over Oregon.

Intense cutting can only increase problems contributing to global warming. We simply *must* start doing things differently. We must start *thinking* in a different way!

And more immediately, these plans seem to us to doom the poor salmon. Rather than making river bank areas more protected, they lessen them. We can't think of anything that can be worse for fish! We think most Oregonians want to have a healthy fish population; we know that we do for *many* reasons!

We are not forestry "experts" but we do feel strongly about these issues and feel that we have enough information to determine the horrible effects of increased cutting, most especially of "clear cutting".

Sincerely,

Robert and Helene England
