As a forester with 36 years experience in western Ore.
I'm very disturbed by the Administration's change of
direction in its management of its western timber areas of
over 2 million acres.

This proposal will completely wreck the good plans BLM
had to manage the best of Oregon forest areas - also will
cause water resource pollution, destroy habitat for wildlife, and
above all - global warming - !!!! Plant Trees instead of
cutting them - You know verywell that Trees produce oxygen
and remove carbon in great amounts. Your scheme will go a
long way toward stopping air pollution & the global warming.

Please don't exchange the good old Oregon practices
for this greed to make money in the short term. Our
National policies are based on good - let's stop here!

Sincerely

Walter E. Enzor
