Table 4-4. ESTIMATED NUMBER OF LAKE ANGLERS, STREAM ANGLERS, AND RELATED EXPENDITURES ON BLM-MANAGED LANDS, FISCAL YEAR 2000 /a/ – concluded

- /a/ The estimated number of anglers 16 years old and older is for calendar year 1996. Anglers include both sportsmen who only fished and those who fished and hunted. The angler group includes not only licensed hook and line anglers, but also those who have no license and those who use special methods such as fishing with spears. Since many anglers enjoyed more than one type of fishing (freshwater excluding Great Lakes, Great Lakes, saltwater), the number of anglers is less than the sum of the three types of fishing. Angler expenditures (BLM) are expressed in calendar year 2000 dollars.
- /b/ Includes only those States with more than 75,000 acres of BLM-administered public lands.
- /c/ Total lake or stream anglers (Statewide) in each State were derived from data in Table 5, 1996 National Survey of Fishing, Hunting, and Wildlife Associated Recreation, individual State Books.
- /d/ The estimated number of anglers on BLM-managed lands was calculated by multiplying the total number of lake or stream anglers in the State by the proportion of BLM-managed lakes or streams in that State. The proportion of BLM lakes and streams was determined by using GIS technology.
- /e/ Derived from data in Table 18, 1996 National Survey of Fishing, Hunting, and Wildlife Associated Recreation, individual State Books.
- /f/ The estimated expenditures by anglers on BLM-managed lands are expressed in calendar year 2000 dollars which were calculated by multiplying the number of lake or stream anglers on BLM lands by angler expenditures and then multiplying that product by the GDP price deflator from Table 7.4 of the Survey of Current Business of June 2000.
