

Bureau of Land Management  
Helium Operations FY2014 Refiner Estimated Excess Capacity

Year	Excess Capacity
2014	50 MMcf*
2015	72 MMcf

Note:

- Volumes are reported in standard temperature (60 degrees F) and pressure (14.696 psia).
- MMcf = one million standard cubic feet
- Per January 2014 crude helium sale's IFO, any non-refiner who is awarded helium under non-allocated sales to report volume and pricing of any tolling activity received for this IFO and price and volume for any tolling activities received during FY2013 (October 1, 2012 to September 30, 2013) **by March 15, 2014**. The BLM will use this information in determining whether tolling is occurring as anticipated in the conditions of sale language established in the HSA.
- Excess Capacity is subject to availability of Helium in the BLM pipeline
- Excess Capacity could be reduced during planned or unplanned shutdowns

\* Prorated from February 2014 to September 2014
