Cliffside Gas Plant Status Report

Date & Time of Outage: August 8, 2019 at 1705 CT

Cause of Outage: Loss of Power Due to Weather Event

Factors Causing Restart:
- The cause of this shutdown is loss of power on the high voltage feed to the plant. Xcel Energy is aware of the issue and is working to quickly identify and correct the issue; we are one of about 500 customers affected by this outage.

Current Status:
- Aug 8 @ 2000 – Power has been restored to the CHEU Operations at Cliffside, and BLM has begun re-start process. We suspect that there is blown capacitor that may impede startup of the K-600, if we reach that point in the start-up process before Xcel Energy is able to replace it, but that does not prevent us from beginning the process. We do not currently have a projection for full production restoration, but will send another update when we have more data about status of the DCS settings and operations.
- Aug 8 @ 2146 – DGA system startup in progress. K-100 startup and system cool down projected to begin Friday (8/9/2019) morning. Storms continue to move through the area, and Xcel Energy has not yet been dispatched to repair the fuses to the capacitor bank; this work must be complete before the K-600 can be started. Anticipate Xcel will make repairs Friday, 8/9/2019.
- Aug 9 @ 0436 – Xcel Energy restored power to the remainder of Cliffside at approximately 0340. Phone service was affected by this lack of power, but are now back online. Xcel Energy has not yet been dispatched to repair the fuses to the capacitor bank, but has communicated with BLM Operators this morning and confirmed they are aware and will be sending a team to address this. DGA system startup continues to go smoothly.

Forecast:
- Continuing startup; Beginning prestart activities for the K100 by 0900.

Pipeline Pressure at Cliffside: At 0720 (CT), Friday, August 9, 2019 = 797 psig

Next Report: 1400 (CT) Friday, August 9, 2019
