Cliffside Gas Plant Status Report

Date & Time of Outage: November 4, 2019 at 0300 CT

Cause of Outage: Planned Maintenance

Factors Causing Restart:
- Planned Maintenance

Current Status:
- K100 – K100 repair progress is continuing per plan. New #1 cylinder installed with packing work beginning today on South side
- K600 purge complete with plans to purge warm flare piping for DGA CO2 vent tie in
- K610 purged and pressure relief valves removed. Sending to testing facility today
- Booster Compressor insulation project progressing well and on schedule
- BLM Occupational Safety & Health Specialist onsite
- DGA vent pipe project (for odor control) is in progress (CASHE Safety Inspection item)
- Orifice plate checks complete
- DCS battery backup system installed yesterday. Testing and configuration continuing
- DGA Flash Tank C-142 purged, rinsed, and opened yesterday with visible coking on internal surfaces and sediment layer. Planning to pressure wash today
- Load testing the batteries for MCC control power is complete

Forecast:
- 4 to 7 days remaining on outage (based on 7-10 day notification/plan)
- Enerflex will start on K600 repairs when K100 is completed to the extent that some of the crew can be moved to the next project.
- BLM/Enerflex crew will be here to start on the chiller today

Pipeline Pressure at Cliffside: At 0800 (CT) Wednesday, November 6 = 1267 psig

Next Report: 1500 (CT) Wednesday, November 6, 2019
