Robert Alward, Wilderness Planner, contractor, Vale District Ref

Subject: Two Vale District WC Units combined with Boise District WC unit

ID-106-24 Split Rock

In March, 2012, Vale District received a Form 2 and affiliated working maps (GIS-generated) and e-mails from the Boise District's Marsing Field Office regarding its 2012 WC inventory unit ID-106-24, Split Rock.

As a result of this received information: (1) Vale District's 2011 WC inventory unit OR-036-083 (with a 4/5/2011 Vale District WC inventory finding) and its new (3/2012) OR-036-097 WC unit are both determined to be contiguous to BLM Boise District's ID-106-24 Split Rock WC inventory unit; and (2) the current (2012) update of the 2011 OR-036-083 unit -- from this point forward -- now also includes the area of OR-036-097 (thus, OR-036-097 – from this point forward -- is no longer a separate WC inventory unit within Vale District).

Respectively, within Vale District, **refer to Vale District WC files for the 2012 OR-036-083 Purser Ridge** unit for combined and complete WC inventory information for it and the contiguous ID-106-24 Split Rock inventory unit. (See the attached 2012 Map 1 for Purser Ridge, OR-036-083 / Split Rock, ID-106-24.)

As documented herein, the OR-036-097 unit has now been combined as part of a 2012 updated 5,696 acre OR-036-083 Purser Ridge WC inventory unit. This 2012 Vale District WC unit has four separate parcels (3,126; 2,350; 71; and 149 acres) – each contiguous to Boise District's ID-106-24 Split Rock WC unit. Since Vale District's WC inventory of its original OR-036-083 unit (approved April 4, 2011), it is apparent with this updated 2012 OR-036-083 unit that -- due to the number, extent and close proximity (to each other) of human developments in each of its two largest parcels – it still does not meeting the natural condition criteria of WC inventory. See supporting documentation: (A) Vale District's April 17, 2012 Map 1 (which reflects, in part, the updated OR-036-083 unit with its human imprints), and (B) the April 5, 2011 Vale District approved Form 2 of the initial OR-036-083 WC inventory unit.

Furthermore, this updated 2012 OR-036-083 unit -- when combined with the contiguous 25,111 acre ID-106-24 Split Rock unit -- would not result in a change of Boise District's current WC inventory finding that its ID-106-24 unit does not meet the natural condition criteria. Respectively, in summary, the contiguous ID-106-24 and updated OR-036-083 combined together – as a whole (30,810 acres) -- does not meet the natural condition criteria; and, thus, does not meet a WC inventory requirement in order to possess wilderness character.
