Prepared by:
U.S. Department of the Interior
Bureau of Land Management
Vale District Office
100 Oregon Street
Vale, Oregon 97918
Evaluation of Current Conditions:

1) Document and review the existing BLM wilderness inventory findings on file, if available, regarding the presence or absence of individual wilderness characteristics, using Form 1, below.

2) Consider relevant information regarding current conditions available in the office to identify and describe any changes to the existing information (use interdisciplinary (ID) team knowledge, aerial photographs, field observations, maps, etc.), and document your findings on Form 2, below.

When Citizen Information has been submitted regarding wilderness characteristics, document the submitted materials including: date of Submission; Name of District(s) and Field Office(s) Affected; Type of material Submitted (e.g. narrative, map, photographs). Evaluate any submitted citizen information regarding the validity of proposed boundaries of the unit(s), the existence of roads and other boundary features, the size of the unit(s), and the presence or absence of wilderness characteristics based on relevant information available in the office (prior BLM inventories, ID team knowledge, aerial photographs, field observations, maps, etc.)

Conduct field reviews as necessary to verify information and to ascertain current conditions. Reach conclusions on current conditions including boundaries, size of areas and presence or absence of wilderness characteristics. Fully explain the basis for each conclusion on form 2, including any critical differences between BLM and citizen information.

Document your findings regarding current conditions for each inventoried area. Describe how the present conditions are similar to, or have changed from, the conditions documented in the original wilderness inventory. Document your findings on Form 2 for each inventory area. Cite to or attach data considered, including photographs, maps, GIS layers, field trip notes, project files, etc.
Year: 2010  Unit Number/Name: OR-036-089 -- Smiths Well

FORM 1 -- DOCUMENTATION OF BLM WILDERNESS INVENTORY
FINDINGS ON RECORD

1. Is there existing BLM wilderness inventory information on all or part of this area?

Yes ___X___ No ___

(If yes, and if more than one unit is within the area, list the names of those units):

A.) Inventory Source(s) -- (X) Denotes all applicable BLM Inventory files, printed maps, or published BLM Decision documents with information pertaining to this unit.

Wilderness Inventories

(X) 1978 – 1980 -- BLM Wilderness Inventory Unit 3-150 of OR-03-11-15 Dry Creek BLM documents stored in Vale District case files)

(X) April 1979 – Wilderness -- Proposed Initial Inventory – Roadless Areas and Islands Which Clearly Do Not have Wilderness Characteristics, Oregon and Washington

Wilderness Decision Documents

(X) August 1979 – Wilderness Review – Initial Inventory, Final Decision on Public Lands Obviously Lacking Wilderness Characteristics and Announcement of Public Lands to be Intensively Inventoried for Wilderness Characteristics, Oregon and Washington (green document)

( ) March 1980 – Wilderness Review – Intensive Inventory; Final Decisions on 30 Selected Units in Southeast Oregon and Proposed Decisions on Other Intensively Inventoried Units in Oregon and Washington (orange document)

B.) Inventory Unit Name(s)/Number(s)
BLM Wilderness Inventory Unit 3-150 of OR-03-11-15 Dry Creek

C.) Map Name(s)/Number(s)

(X) Final Decision – Initial Wilderness Inventory Map, August 1979, Oregon

( ) Proposed Decision -- Intensive Wilderness Inventory of Selected Areas Map, October 1979, Oregon

( ) Intensive Wilderness Inventory Map, March 1980, Oregon

( ) Intensive Wilderness Inventory --Final Decisions Map, November 1980, Oregon.

D.) BLM District(s)/Field Office(s)

Vale District Office
Jordan Field Office

2. BLM Inventory Findings on Record

(Existing inventory information regarding wilderness characteristics (if more than one BLM inventory unit is associated with the area, list each unit and answer each question individually for each inventory unit):

Inventory Source: See above.

APPENDIX B – INVENTORY AREA EVALUATION

Evaluation of Current Conditions:

1) Document and review the existing BLM wilderness inventory findings on file, if available, regarding the presence or absence of individual wilderness characteristics, using Form 1, below.

2) Consider relevant information regarding current conditions available in the office to identify and describe any changes to the existing information (use interdisciplinary (ID) team knowledge, aerial photographs, field observations, maps, etc.), and document your findings on Form 2, below.

When Citizen Information has been submitted regarding wilderness characteristics, document the submitted materials including: date of Submission; Name of District(s) and Field Office(s) Affected; Type of material Submitted (e.g. narrative, map, photographs). Evaluate any submitted citizen information regarding the validity of proposed boundaries of the unit(s), the existence of roads and other boundary features, the size of the unit(s), and the presence or absence of wilderness characteristics based on relevant information available in the office (prior BLM inventories, ID team knowledge, aerial photographs, field observations, maps, etc.)

Conduct field reviews as necessary to verify information and to ascertain current conditions. Reach conclusions on current conditions including boundaries, size of areas and presence or absence of wilderness characteristics. Fully explain the basis for each conclusion on form 2, including any critical differences between BLM and citizen information.

Document your findings regarding current conditions for each inventoried area. Describe how the present conditions are similar to, or have changed from, the conditions documented in the original wilderness inventory. Document your findings on Form 2 for each inventory area. Cite to or attach data considered, including photographs, maps, GIS layers, field trip notes, project files, etc.
FORM 2 -- DOCUMENTATION OF CURRENT WILDERNESS INVENTORY CONDITIONS

Unit Number/Name – OR-036-089 – Smiths Well

Description of Current Conditions: [Include land ownership, location, topography, vegetation features and summary of major human uses/activities.]

1. Is the unit of sufficient size?

Yes X No

Description: Refer to this inventory unit’s associated Map 1 for its location. The 5,222 acre unit was included as part of the original BLM unit 3-150 of OR-03-11-15 Dry Creek of the latter 1970’s meeting the size criteria. Acreage for unit OR-036-089 in Form 2 is calculated from BLM GIS information. The 1478 acre difference from Form 1 occurs because the unit was determined by the current inventory to have a new boundary on the northeast side. Because of wildland range fires and rangeland rehabilitation of these areas over the past thirty years the existing motorized trail in the 1970’s inventory has been graded and mechanically maintained to be reclassified as a road and now qualifies as a boundary for the new unit. The unit boundary consists of BLM road 6378-0-0A0 and a road segment along the northwest side, BLM road 6378-0-00 and a road segment along the southern side, and a BLM non-numbered road along the northeast side. The natural-surfaced boundary roads receive mechanical maintenance as needed to keep them passable on a regular and continuous (seasonal) basis.

2. Is the unit in a natural condition?

Yes ______ No _X_ N/A ______

Description: The majority of the unit consists of flat to rolling open sagebrush plains in the northern two-thirds while the remaining portion consists of dissected terraces. The majority of the unit gently slopes to the south and drainages into Dry Creek along its southern boundary. The remaining few drainages located along the northwest boundary flow northward into Crooked Creek. Most of the unit has received vegetation treatments or rehabilitation from wildland fires throughout the past four decades. Vegetation within the unit consists mainly of nonnative crested wheat grass while the remaining undisturbed areas consist of big sagebrush and native grasses. Elevations range from 3,729 to 3,919 feet.

Refer to this inventory unit’s associated Map 1 and Map 2 for its human developments. Human imprints within the unit include 2.2 miles of 3 motorized primitive trails, 7.4 miles of fence line, 1.6 miles of 3 pipeline systems with 9 troughs, and remnant visual evidence of 11 vegetation manipulation projects (implemented 1965-2006) that create linear contrast of vegetation species throughout the larger portion of the unit. Vegetation
treatments numbers include both the vegetation alteration treatment and the reseeding operation to rehabilitate the vegetation alteration.

Because of the number of intrusions, their proximity to each other, and the lack of topographic and vegetative screening, the works of man are substantially noticeable. Overall, the area appears to be primarily affected by the influences of man with the imprint of humans noticeable to the average visitor. Unit OR-036-089 does not appear natural to the average visitor.

3. Does the unit have outstanding opportunities for solitude?

Yes ______ No ___ X ___ N/A ______

Description: Unit OR-036-089 is an irregular triangular shape approximately 5.0 miles across its widest point along the southern boundary and comes to a point in the north of about 0.5 miles in width that extends northward for another 0.8 miles. The northwest and northeast boundary sides of the unit are each about 3.5 miles in length. The majority of the unit consists of flat to rolling open sagebrush plains in the northern two-thirds while the remaining portion consists of dissected terraces. The area containing the dissected terraces provides the majority of variation in topographic relief in the unit. These terraces rise about 100 feet above the Dry Creek drainage to the south. Topographic relief is minimal within the unit with elevations ranging from about 3,729 feet mean sea level (msl) at the southwest point of the triangle, rising to 3,919 feet msl along the northern boundary. The unit’s shape combined with the lack of both vegetative screening and sufficient topographic diversity, precludes outstanding opportunities for solitude. BLM concludes that unit OR-036-089 does not provide outstanding opportunities for solitude.

4. Does the unit have outstanding opportunities for primitive and unconfined recreation?

Yes ______ No ___ X ___ N/A ______

Description: The dominate dispersed recreation activity is hunting of upland and big game species (deer and chukar); associated horseback riding and hiking occurs. Dispersed rockhounding for snake agate occasionally occurs near its northern boundary. Individually or collectively the opportunity to participate in and experience these activities within the unit is not outstanding. There are no unique or special features associated with the unit which would more so attract a visitor who is seeking a primitive and unconfined recreational experience. Unit OR-036-089 does not possess outstanding opportunities for primitive and unconfined recreation.

5. Does the unit have supplemental values?

Yes ______ No ___ X ___ N/A ______

Description:
Summary of Findings and Conclusion

Unit Name and Number: OR-036-089 -- Smiths Well

Summary Results of Analysis:

1. Does the area meet any of the size requirements? _X__ Yes _____ No

2. Does the area appear to be natural? ______Yes __X__ No

3. Does the area offer outstanding opportunities for solitude or a primitive and unconfined type of recreation? ______Yes __X__ No _____ NA

4. Does the area have supplemental values? _____Yes __X__ No _____ NA

Conclusion -- check one:

_____ The area, or a portion of the area, has wilderness character.

__X__ The area does not have wilderness character.
